Knowledge clinic guidance

# Knowledge Clinics

- » An opportunity to get advice from peers and from facilitators on a specific challenge that you are facing.
- » During the session a set of “patients” will describe their challenge while a set “doctors” listen and provide advice.
- » The objective is to promote peer to peer support while helping participants come up with new approaches to tackle real-world problems.

# Format

Each “peer assist” clinic consists of **three steps**:

- » The “patient” has 5 minutes to provide a detailed description of the problem or challenge they face. They should be as specific as possible to get specific feedback in response.
- » The “doctors” have 5 minutes to ask follow-up questions that are for clarification only.
- » There is then 15 minutes for doctors to provide feedback on their recommendations for this problem.
