

NAP Global Network

Coordinating
Climate-Resilient
Development

Anne Hammill

February 6, 2018

Nadi, Fiji

Problem context

- **Need more and higher quality NAPs to accelerate strategic investments in climate-resilient development**
- **This is limited by:**
 - Limited and diverse understandings of NAP processes
 - Relatively little ownership and leadership in NAP processes
 - Insufficient (institutional, technical) capacity and knowledge
 - Insufficient (uncoordinated) technical and financial support
- **More recently...**
 - GCF and NDCs – more actors, processes, agendas...

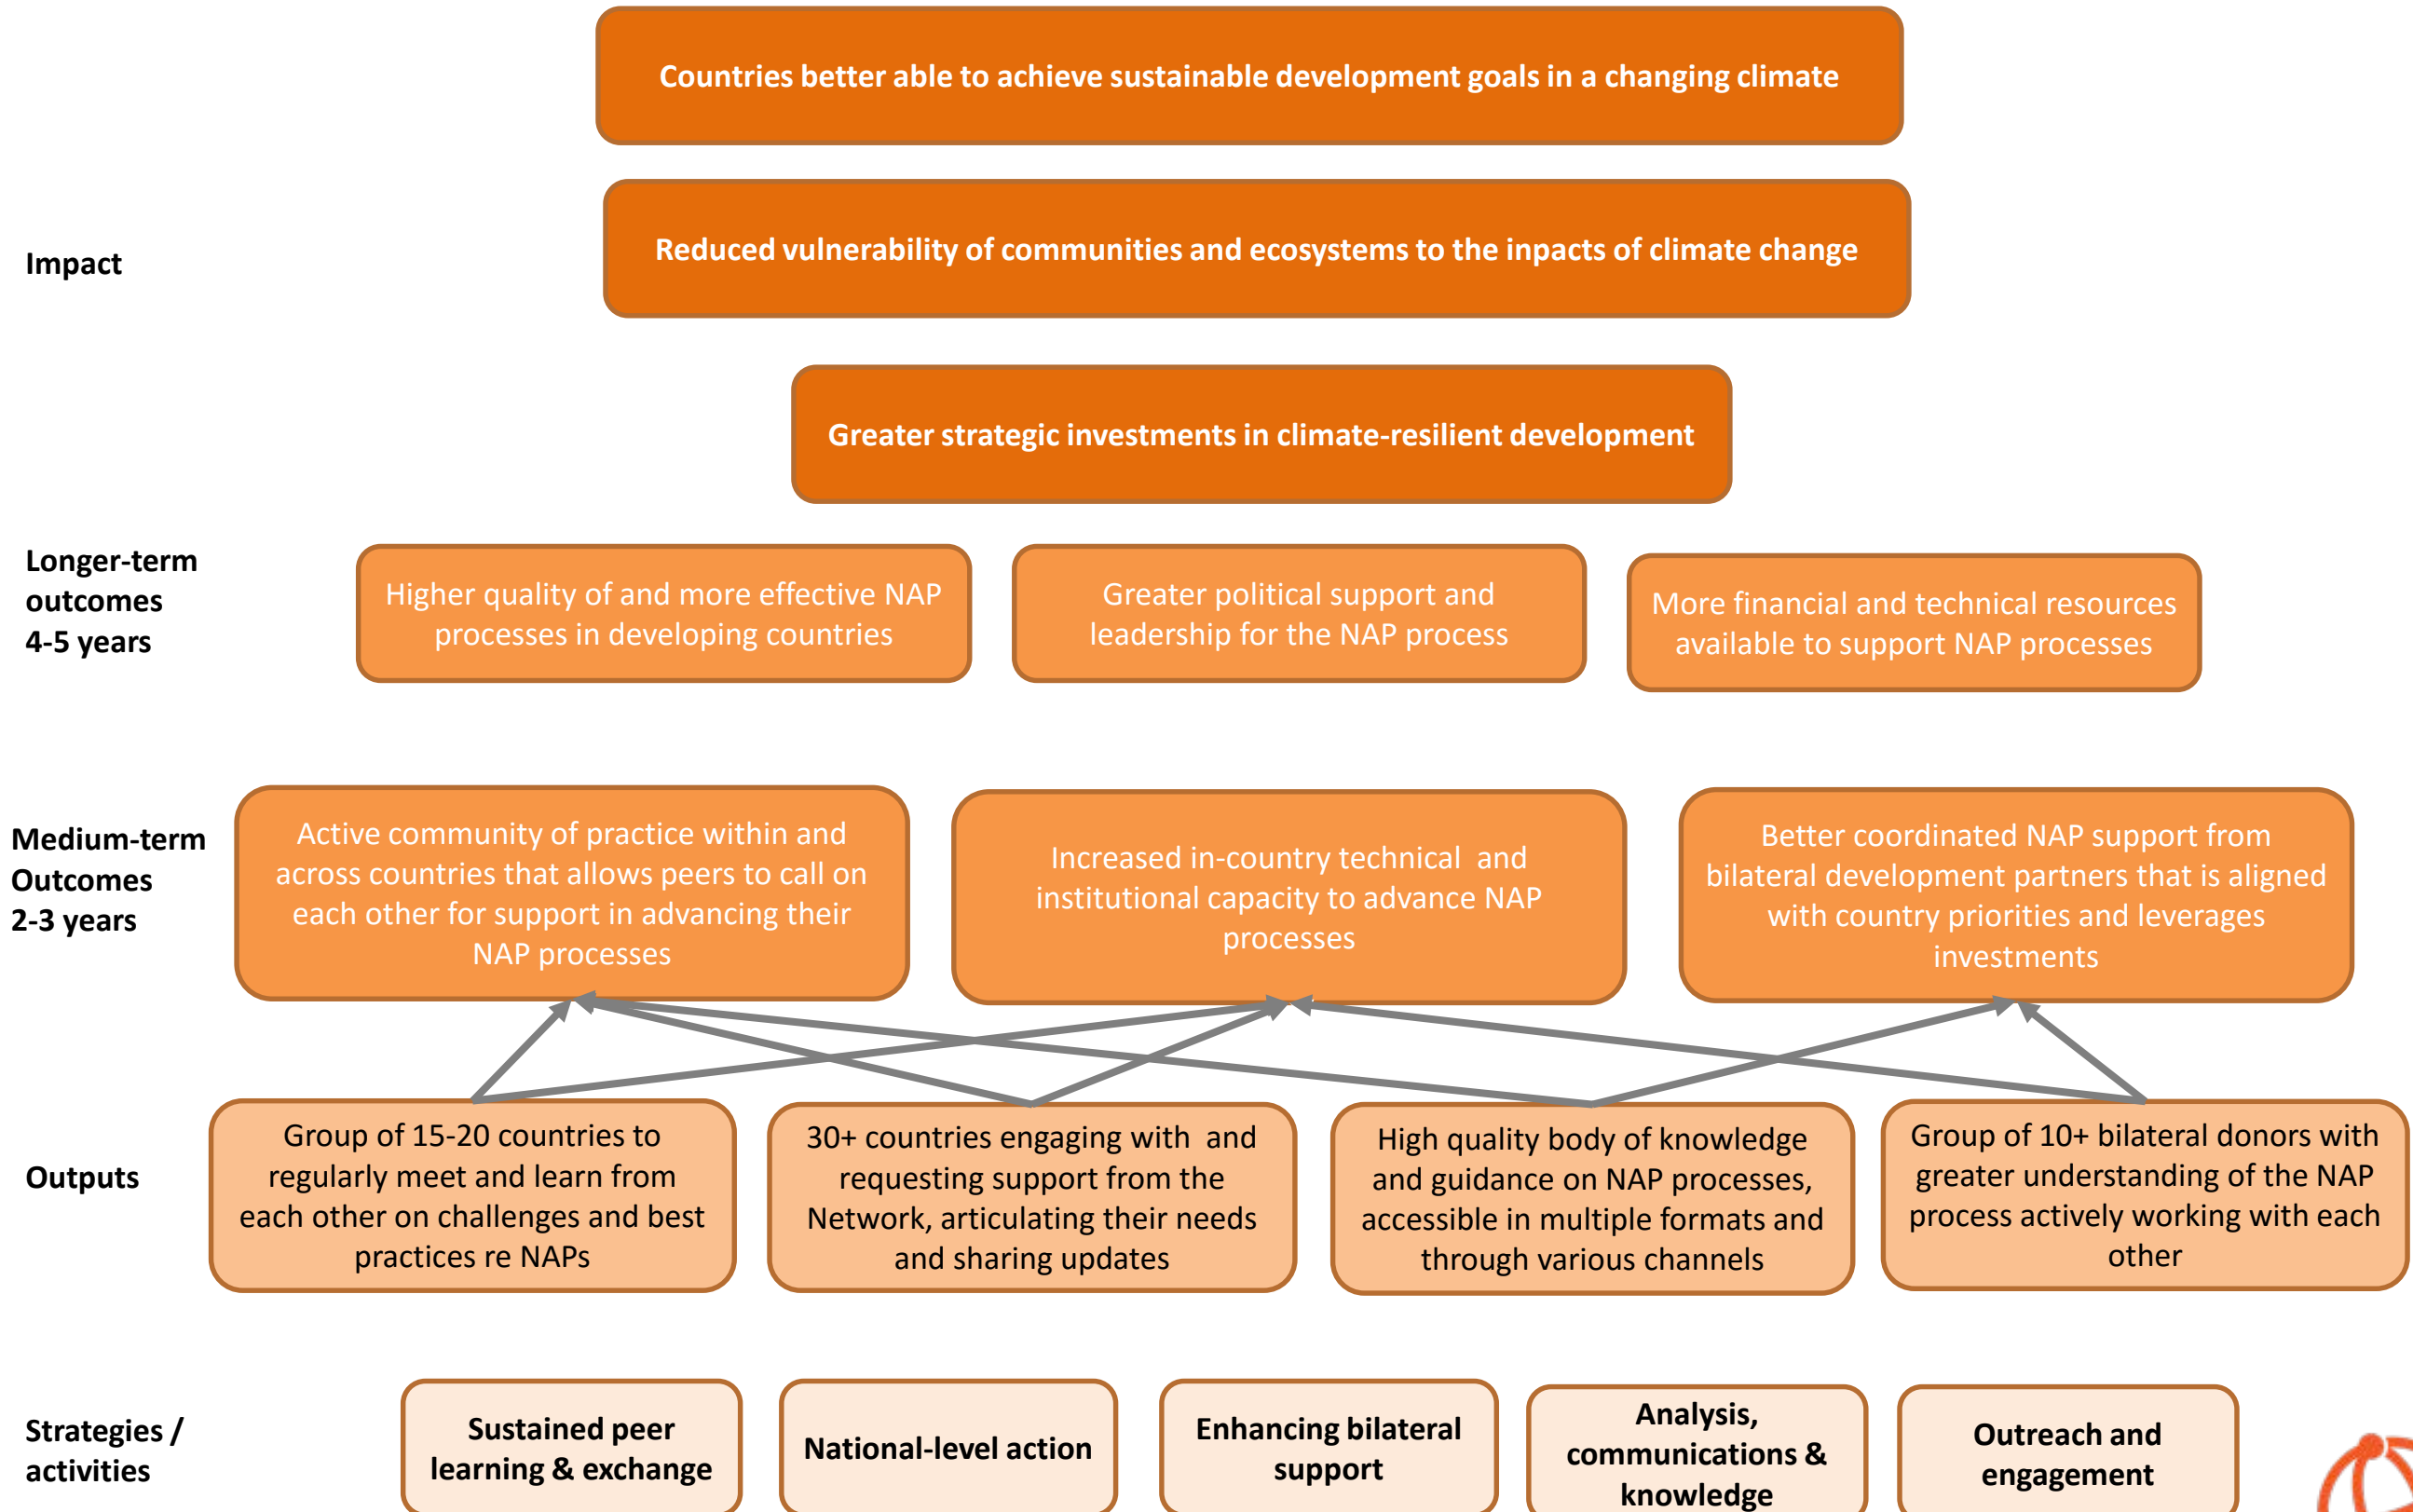

How the NGN helps

- Offer thought leadership, knowledge management on NAP-related issues from a more neutral vantage point
- Provide a space and/or platform for peer learning
- Provided targeted and timely technical support
- Support coordination – particularly among / with bilateral donor agencies

Theory of Change
