Countries are increasingly using their NAP processes to realize gender-responsive climate action and act on the Gender Action Plan (GAP) under the United Nations Framework Convention on Climate Change.

Since 2017, we have partnered with governments in 13 countries to support the integration of gender considerations in their NAP processes. At the same time, we share learning and synthesize progress in integrating gender in NAP processes.

In the Republic of the Marshall Islands, the gender and human rights analysis is an important basis for developing their NAP document.

We support targeted gender analysis to inform adaptation decision making.

In Côte d’Ivoire, the ministries responsible for gender and climate change are working on a Memorandum of Understanding (MoU) to strengthen their collaboration.

In Ghana, there is a concrete strategy for integrating gender into the implementation of its Green Climate Fund NAP readiness project.

We support the establishment of institutional arrangements for gender-responsive climate action.

In Kenya, photography and storytelling training is empowering underrepresented women to communicate their adaptation needs and priorities to decision-makers.

We work with partners to increase participation in adaptation decision making.
