

About	This overview is part of a series prepared by the NAP Global Network Secretariat sharing analysis of the structures of national adaptation plan (NAP) documents.
	For more overviews of NAP documents, please visit the NAP Trends platform hosted by the NAP Global Network at: https://trends.napglobalnetwork.org/
	To read the full NAP document, visit the United Nations Framework Convention on Climate Change's (UNFCCC) NAP Central: https://napcentral.org/

Document Title	Plan National d'Adaptation aux Changements Climatiques (PNA) du Burkina Faso
Year of NAP submission to the UNFCCC	2025
Version	2
Last updated on	2025-04-14
Notes	This was translated using DeepL, so there may be minor grammatical and translation issues.

Level	Label	Content	Parent Tag	Page #
1	Vision	Burkina Faso manages its economic and social development more effectively through the implementation of planning mechanisms and measures that take into account resilience and adaptation to climate change by 2050		57
		By 2028, Burkina Faso has the institutional and community capacity to manage climate impacts proactively and resiliently, through integrated planning and innovative projects		57
2	Overall Objective	Strengthen the resilience of populations and ecosystems in the face of climate change in order to improve the socio-economic conditions of communities		
3	Strategic Axes			
	Strategic Axis 1	Adapting priority sectors to climate change		60
	Strategic Axis 2	Climate change adaptation research and development		63
	Strategic Axis 3	Governance of climate change adaptation interventions		65
4	Strategic Objectives			
	Strategic Objective 1.1	Strengthen the capacity of agro-pastoral sectors to adapt to climate change	Strategic Axis 1	60-67
	Strategic Objective 1.2	Strengthen the adaptive of forestry, fisheries and wildlife sectors to climate change	Strategic Axis 1	60-67
	Strategic Objective 1.3	Strengthen the ability of the infrastructure, housing, energy and health sectors to adapt to climate change	Strategic Axis 1	60-67
	Strategic Objective 2.1	Develop innovative techniques and technologies for adaptation to climate change	Strategic Axis 2	60-67
	Strategic Objective 2.2	Improve the adoption of innovative techniques and technologies for adaptation to climate change	Strategic Axis 2	60-67
	Strategic Objective 3.1	Strengthen the legal, policy and organizational framework for climate resilience	Strategic Axis 3	60-67
	Strategic Objective 3.2	Ensure resource mobilization and planning for NAP implementation	Strategic Axis 3	60-67
	Strategic Objective 3.3	Improve the availability and accessibility of climate information and the visibility of interventions	Strategic Axis 3	60-67
5	Strategic Outcomes			
	Strategic Outcome 1.1.1	Farm resilience to the adverse effects of climate change is strengthened	Strategic Objective 1.1	60-67
	Strategic Outcome 1.1.2	The vulnerability of agro-pastoralists and pastoral and fisheries resources to the adverse effects of climate change is reduced	Strategic Objective 1.1	60-67
	Strategic Outcome 1.2.1	The resilience of water resources to the adverse effects climate change is strengthened	Strategic Objective 1.2	60-67
	Strategic Outcome 1.2.2	The adaptive capacity of forest ecosystems, including the wildlife the face of the adverse effects of climate change	Strategic Objective 1.2	60-67
	Strategic Outcome 1.3.1	The energy sector's ability to adapt to the effects climate change are reinforced	Strategic Objective 1.3	60-67
	Strategic Outcome 1.3.2	The resilience of infrastructures and habitats to the effects of climate change is strengthened	Strategic Objective 1.3	60-67
	Strategic Outcome 1.3.3	The healthcare sector's capacity to adapt to change to protect the population	Strategic Objective 1.3	60-67
	Strategic Outcome 2.1.1	Technical and technological research in the agro-sylvo-pastoral and hydrological fields for adaptation to climate change is strengthened	Strategic Objective 2.1	60-67
	Strategic Outcome 2.1.2	Technical and technological research in the fields of health, housing and energy infrastructures for adaptation to climate change is developed	Strategic Objective 2.1	60-67
	Strategic Outcome 2.2.1	The dissemination of the results of scientific research and innovation is strengthened	Strategic Objective 2.2	60-67
	Strategic Outcome 2.2.2	Capitalizing on the results of research and innovation is reinforced	Strategic Objective 2.2	60-67
	Strategic Outcome 3.1.1	The policy and legal framework for climate resilience is strengthened	Strategic Objective 3.1	60-67
	Strategic Outcome 3.1.2	Environmental and management organizational framework natural resources is strengthened	Strategic Objective 3.1	60-67
	Strategic Outcome 3.2.1	Increased mobilization of financial resources	Strategic Objective 3.2	60-67
	Strategic Outcome 3.2.2	Climate resilience interventions are planned	Strategic Objective 3.2	60-67
	Strategic Outcome 3.3.1	Availability of and access to reliable climatic information is improved	Strategic Objective 3.3	60-67

	Strategic Outcome 3.3.2	Visibility of interventions is improved	Strategic Objective 3.3	60-67
3	Priority Sectors, Cross-cutting Themes, and Their Objectives			
	Sector 1	Water Resources Sector: Strengthen the resilience of water resources to the adverse effects of climate change		69
	Sector 2	Agriculture Sector: Strengthen the resilience of farms to the adverse effects of climate change		73
	Sector 3	Livestock and Fishery Resources: Reduce the vulnerability of agropastoralists and pastoral and fisheries resources to the adverse effects of climate change		78
	Sector 4	Environment/Natural Resources Sector: Strengthen the adaptive of forest ecosystems, including wildlife in the face of the adverse effects of climate change		84
	Sector 5	Health Sector: Strengthen the sector's adaptive capacities through protection against the impacts of climate change		88
	Sector 6	Energy Sector: Improve the energy sector's ability to adapt to the adverse effects of climate change		91
	Sector 7	Infrastructure and Housing Sector: Strengthen the resilience of infrastructures and habitats to the effects of climate change		95
	Theme 1	Gender Theme: Help improve the resilience of women, young people and people with disabilities		99
	Theme 2	Civil Society Organizations (CSOs) Theme: Improve the resilience capacities of civil society organizations for inclusive governance in the implementation of the NAP in Burkina Faso		103
4	Climate Risks			
	Risk 1	Flooding		70-106
	Risk 2	Drought		70-106
	Risk 3	Strong heat		70-106
4	Types of Measure			
	Type 1	Physical		70-106
	Type 2	Strategic		70-106
	Type 3	Institutional		70-106
5	Adaptation Measures			
	Measure 1.1	Protect water resource mobilization infrastructure - Ensure the maintenance and upkeep of water resource mobilization infrastructure - Protect the banks of rivers and water bodies - Delimit buffer zones (set-back zones)	Sector 1, Risk 1, Type 1	70-72
	Measure 1.2	Protect water resource mobilization infrastructure - Monitor compliance with buffer zone regulations	Sector 1, Risk 1, Type 2	70-72
	Measure 1.3	Improve hydrological forecasts - Strengthen the national water information system	Sector 1, Risk 1, Type 2	70-72
	Measure 1.4	Strengthen water quality monitoring - Strengthen the capacities of water agencies - Improve water quality monitoring systems to help reduce the impact of floods by ensuring water resources are not contaminated	Sector 1, Risk 1, Type 3	70-72
	Measure 1.5	Mobilize water resources - Build dams, basins, reservoirs, and underground aquifers to provide a source of water during drought periods	Sector 1, Risk 2, Type 1	70-72
	Measure 1.6	Restore wetlands - Carry out dredging of water bodies - Protect the banks of rivers and water bodies - Delimit buffer zones (set-back zones)	Sector 1, Risk 2, Type 1	70-72
	Measure 1.7	Ensure integrated water resource management - Reduce non-essential use of water and improve water use efficiency and the promotion of water savings - Reuse and recycle water - Strengthen the capacities of Local Water Committees	Sector 1, Risk 2, Type 2	70-72
	Measure 1.8	Improve knowledge on water resources - Develop informational documents on water resources - Acquire equipment contributing to knowledge of water resources - Conduct studies on water resource knowledge - Carry out water level gauging campaigns	Sector 1, Risk 2, Type 2	70-72
	Measure 1.9	Improve hydrological forecasting - Strengthen the national water information system	Sector 1, Risk 2, Type 3	70-72
	Measure 1.10	Protect water mobilization infrastructure - Carry out reforestation - Protect the banks of rivers and water bodies	Sector 1, Risk 3, Type 1	70-72

Measure 1.11	Ensure rational water resource management - Prioritize the use of water resources during periods of extreme heat	Sector 1, Risk 3, Type 2	70-72
Measure 1.12	Develop community communication, awareness, and education - Strengthen community capacities on the impacts of extreme heat on water resources and promote water-saving practices	Sector 1, Risk 3, Type 3	70-72
Measure 2.1	Implement a drainage system - Set up an appropriate drainage system to redirect excess water from fields and crops - Promote the use of runoff water collection basins (BCER) to control water flow on farms	Sector 2, Risk 1, Type 1	74-77
Measure 2.2	Promote the use of flood-resistant crop varieties - Use improved seeds adapted to excess water - Develop varieties that adapt to floods	Sector 2, Risk 1, Type 2	74-77
Measure 2.3	Practice soilless cultivation - Promote soilless agriculture to control water flow on crops	Sector 2, Risk 1, Type 2	74-77
Measure 2.4	Practice crop rotation - Alternate crop types in the same field each year to reduce soil saturation	Sector 2, Risk 1, Type 2	74-77
Measure 2.5	Strengthen capacities - Train farmers on post-harvest treatment and crop storage: build skills in humidity control, fumigation, harvest calendar management, and crop drying	Sector 2, Risk 1, Type 2	74-77
Measure 2.6	Develop early warning systems - Set up early warning systems to help farmers anticipate floods, allowing them to prepare and protect their crops	Sector 2, Risk 1, Type 3	74-77
Measure 2.7	Strengthen water conservation techniques - Improve water management on farms through rainwater harvesting, soil moisture monitoring, and the use of water-efficient irrigation systems to optimize water use	Sector 2, Risk 2, Type 1	74-77
Measure 2.8	Promote the use of short-cycle crop varieties - Use improved short-cycle varieties to reduce water needs for fruit maturation	Sector 2, Risk 2, Type 1	74-77
Measure 2.9	Reforest - Continue and strengthen actions to improve the agricultural landscape by encouraging tree and pasture planting, to increase synergy, adapt to and mitigate climate change, and enhance ecosystem services and local livelihoods	Sector 2, Risk 2, Type 1	74-77
Measure 2.10	Develop irrigation systems - Promote surface irrigation, sprinkler irrigation, and drip irrigation systems	Sector 2, Risk 2, Type 2	74-77
Measure 2.11	Cultivate drought-resistant crops - Develop improved seeds adapted to water stress	Sector 2, Risk 2, Type 2	74-77
Measure 2.12	Promote smart agriculture - Promote conservation agriculture, agroforestry, and agroecology	Sector 2, Risk 2, Type 2	74-77
Measure 2.13	Promote agricultural insurance - Promote index insurance for agricultural products by encouraging subscription to national agricultural insurance (African Risk Capacity)	Sector 2, Risk 2, Type 3	74-77
Measure 2.14	Strengthen financial support - Facilitate access to financing for small-scale farmers, cooperatives, and small and medium-sized enterprises to help them reduce production losses	Sector 2, Risk 3, Type 1	74-77
Measure 2.15	Ensure soil management - Promote conservation agriculture and the use of organic matter to help regulate soil temperature and moisture levels, making crops more resistant to heat stress	Sector 2, Risk 3, Type 2	74-77
Measure 2.16	Cultivate heat-resistant crops - Develop and promote improved seeds that are more resistant to heat stress	Sector 2, Risk 3, Type 2	74-77
Measure 2.17	Develop communication, awareness, and education - Strengthen farmers' capacity to make informed decisions to improve crop resilience to extreme heat	Sector 2, Risk 3, Type 3	74-77
Measure 3.1	Build water collection points - Set up a drainage system and build water points to collect surplus water that can be used for livestock	Sector 3, Risk 1, Type 1	79-83
Measure 3.2	Create emergency funds for livestock farmers - Provide immediate financial support to livestock farmers affected by floods to help them cope with the loss of livestock, grazing areas, and agricultural infrastructure	Sector 3, Risk 1, Type 1	79-83
Measure 3.3	Protect water points from silting and eutrophication - Protect riverbanks to prevent floods from causing silting and eutrophication of water bodies, which endangers fishery resources	Sector 3, Risk 1, Type 1	79-83

		Set up floating cages - House fish in controlled conditions to provide a safe environment during floods. These cages can be equipped with automatic feeding and monitoring systems to ensure fish welfare during extreme weather events		
	Measure 3.4		Sector 3, Risk 1, Type 1	79-83
		Build fish passes at dam levels to protect fish during floods - Protect fish from sudden and dangerous falls during flooding events		
	Measure 3.5		Sector 3, Risk 1, Type 1	79-83
		Develop early warning systems - Provide real-time information to agro-pastoralists on the occurrence of floods		
	Measure 3.6		Sector 3, Risk 1, Type 2	79-83
		Strengthen the capacities of livestock farmers - Provide farmers with technical support, tools, and methods to understand the issue, identify necessary actions to implement for adapting livestock systems while contributing to reducing the carbon footprint of livestock farming		
	Measure 3.7		Sector 3, Risk 1, Type 2	79-83
		Ensure the development of a sustainable fisheries and aquaculture sector - Ensure more professional and sustainable management of the fisheries sector		
	Measure 3.8		Sector 3, Risk 1, Type 3	79-83
		Improve forage availability - Practice cultivation, harvesting, and preservation of natural forage to address livestock feed shortages		
	Measure 3.9		Sector 3, Risk 2, Type 1	79-83
		Improve water availability in pastoral areas and increase water retention capacity - Carry out pastoral and borehole forage planting - Carry out waterpoint restoration actions		
	Measure 3.10		Sector 3, Risk 2, Type 1	79-83
		Improve genetic potential and increase the hardiness of livestock - Implement breeding and genetic improvement programs to better adapt animals to arid conditions and water stress		
	Measure 3.11		Sector 3, Risk 2, Type 1	79-83
		Strengthen national food security and livestock feed reserves - Establish food reserves (hay, straw, fodder, and concentrates) for livestock. These reserves should be stored during surplus periods and be of good quality for use as supplementary feed during extended drought periods		
	Measure 3.12		Sector 3, Risk 2, Type 1	79-83
		Build resilient silos and livestock feed processing units - Acquire processing and value-added units for livestock feed from agricultural by-products		
	Measure 3.13		Sector 3, Risk 2, Type 1	79-83
		Organize livestock transhumance plans - Implement planned transhumance programs to access alternative grazing areas during drought periods. These plans should consider water sources, available pasture, and weather forecasts		
	Measure 3.14		Sector 3, Risk 2, Type 1	79-83
		Establish hatcheries for the restocking of fish species - Ensure the controlled reproduction of endangered indigenous fish species - The eggs and fry produced in hatcheries should be used to restock water bodies, support aquaculture development, and restore aquatic ecosystems		
	Measure 3.15		Sector 3, Risk 2, Type 1	79-83
		Transform pastoral areas into zones of intensified animal production (ZIPA) - Build pastoral infrastructure and carry out land tenure, food, and health security actions		
	Measure 3.16		Sector 3, Risk 2, Type 2	79-83
		Develop a restoration plan for degraded pastures - Restore degraded lands and re-establish plant cover using CES/DRS techniques and the sedentarization of herds		
	Measure 3.17		Sector 3, Risk 2, Type 2	79-83
		Establish a peer-learning network for community-based adaptation - Promote multi-actor platforms focused on building and sharing adaptation solutions		
	Measure 3.18		Sector 3, Risk 2, Type 2	79-83
		Improve animal health - Systematically vaccinate and deworm animals		
	Measure 3.19		Sector 3, Risk 2, Type 3	79-83
		Develop pastoral areas - Set up specific zones in pastoral areas where animals can rest in the shade and access cool water during heatwave. This measure consists of providing rest areas and watering troughs to ensure livestock hydration to mitigate heat waves		
	Measure 3.20		Sector 3, Risk 3, Type 1	79-83
		Set up monitoring systems for water reserves and drought indicators - Install monitoring systems to monitor in real time the levels of water reserves, forage, and other climatic indicators to assess the extent of drought and its impact on water and forage resources		
	Measure 3.21		Sector 3, Risk 3, Type 2	79-83
		Practice sedentarization - Keep livestock in a fixed place to withstand heatwaves and associated diseases		
	Measure 3.22		Sector 3, Risk 3, Type 2	79-83
		Develop communication, awareness, and education - Strengthen the capacities of communities on the impacts of heatwaves on water and forage resources and promote adaptation measures		
	Measure 3.23		Sector 3, Risk 3, Type 3	79-83
		Improve drainage systems - Rehabilitate hydro-agricultural infrastructure - Build stormwater drainage channels - Build fish passes at the level of dams		
	Measure 4.1		Sector 4, Risk 1, Type 1	85-87

Measure 4.2	Improving the conservation and restoration of forest resources - Produce and plant species adapted to flood-prone areas - Strengthen systems to protect forest resources from flooding - Restore plant cover	Sector 4, Risk 1, Type 1	85-87
Measure 4.3	Improve the weather forecasts and hydrology - Strengthening the early warning system on climate change	Sector 4, Risk 1, Type 2	85-87
Measure 4.4	Promote seed varieties adapted to flood-prone areas. - Develop and disseminate seeds adapted to flood-prone areas	Sector 4, Risk 1, Type 2	85-87
Measure 4.5	Improving the availability of climatic, hydrological and weather information - Strengthen ANAM and DGRE observation network - Improving consultation frameworks between the various players	Sector 4, Risk 1, Type 3	85-87
Measure 4.6	Promote sustainable land management - Promote the of CES/DRS techniques and other GDT best practices	Sector 4, Risk 2, Type 1	85-87
Measure 4.7	Improve water conservation and availability in protection areas (APF) - Building and rehabilitating water mobilization	Sector 4, Risk 2, Type 1	85-87
Measure 4.8	Strengthen the forest management - Reforestation - Promote the use of conservation and protection techniques for forest resources. (Burkina Faso PNA 2025 English, p. 101)	Sector 4, Risk 2, Type 1	85-87
Measure 4.9	Promoting forest seed varieties adapted to drought conditions - Develop and disseminate drought-resistant forest seeds	Sector 4, Risk 2, Type 2	85-87
Measure 4.10	Develop early warning systems - Strengthening partnerships warning system operators and reinforcing the early warning on bushfires	Sector 4, Risk 2, Type 3	85-87
Measure 4.11	Improve the forest potential - Reforestation - Promoting the use of conservation and protection of forest resources	Sector 4, Risk 3, Type 1	85-87
Measure 4.12	Improve water conservation and availability in protection areas (APF) - Building and rehabilitating water mobilization facilities	Sector 4, Risk 3, Type 1	85-87
Measure 4.13	Promote forest seed varieties adapted to strong heat - Develop and disseminate forest seeds adapted to hot weather	Sector 4, Risk 3, Type 2	85-87
Measure 4.14	Develop community communication, awareness and education - Build community capacity on the impacts extreme heat on forest resources and the promotion of measures adaptation	Sector 4, Risk 3, Type 3	85-87
Measure 5.1	Building flood-resistant healthcare facilities - Use flood-resistant building materials and promote the integration of efficient drainage systems	Sector 5, Risk 1, Type 1	89-90
Measure 5.2	Improve access to healthcare - Provide mobile care units and storage facilities for medical supplies in flood-prone areas	Sector 5, Risk 1, Type 2	89-90
Measure 5.3	Integrating disaster management and coordination at all levels - Integrate health into disaster management plans to ensure a coordinated response to flooding. - Integrate climate, health and environmental issues into teaching programs at all levels	Sector 5, Risk 1, Type 3	89-90
Measure 5.4	Make food available - Food shortage due to droughts can lead to acute mortality, especially among children	Sector 5, Risk 2, Type 1	89-90
Measure 5.5	Make emergency food stocks available - These stocks will make up for food shortages in good time	Sector 5, Risk 2, Type 2	89-90
Measure 5.6	Institutionalize free or subsidized supplies to the most needy in times of severe drought - These measures will enable us to be effective in real time	Sector 5, Risk 2, Type 3	89-90
Measure 5.7	Improve the healthcare infrastructure - Modernize infrastructures, including air conditioning and ventilation systems	Sector 5, Risk 3, Type 1	89-90
Measure 5.8	Promote healthy behaviours - Encourage people to adopt healthy behaviors, such as staying hydrated, seeking shade and avoiding outdoor activities during the hottest hours of the day	Sector 5, Risk 3, Type 2	89-90
Measure 5.9	Improve access to healthcare - Increase the availability of medical services, particularly during the warmer months, to manage health problems related to heat	Sector 5, Risk 3, Type 3	89-90

Measure 6.1	Strengthen the protection of energy infrastructure - Install systems to protect installations. - Install a drainage system for rainwater and runoff to protect energy facilities	Sector 6, Risk 1, Type 1	92-94
Measure 6.2	Identify suitable sites for infrastructure development - Conduct the necessary technical studies for infrastructure installation	Sector 6, Risk 1, Type 2	92-94
Measure 6.3	Promote resilient infrastructure models - Design and/or purchase flood-resistant energy equipment	Sector 6, Risk 1, Type 2	92-94
Measure 6.4	Develop early warning systems - Strengthen partnerships with warning system operators and reinforce the early warning system	Sector 6, Risk 1, Type 3	92-94
Measure 6.5	Develop technologies to compensate for the use of wood energy - Promoting clean cookstoves to households. - Promoting the use of biogas	Sector 6, Risk 2, Type 1	92-94
Measure 6.6	Implement a strategy to save electricity - Promote the acquisition of energy-efficient lighting equipment and systems. - Develop awareness and education programs on energy-saving habits and actions. - Promoting the use of equipment solar energy	Sector 6, Risk 2, Type 2	92-94
Measure 6.7	Promote renewable energy - Encouraging the use of renewable energies such as solar power, which is less vulnerable to drought, can help mitigate the effects of drought on the environment. energy production	Sector 6, Risk 2, Type 3	92-94
Measure 6.8	Develop early system system - Strengthen partnerships with warning system operators and reinforce early warning systems to respond more effectively to droughts	Sector 6, Risk 2, Type 3	92-94
Measure 6.9	Use suitable electrical appliances - Acquire heat-resistant equipment and appliances	Sector 6, Risk 3, Type 1	92-94
Measure 6.10	Strengthen the energy mix - Diversify energy to improve electricity supply. - Setting up incentives for acquisition and use of solar equipment	Sector 6, Risk 3, Type 2	92-94
Measure 6.11	Develop early warning system - Strengthen partnerships with warning system operators and reinforce the early warning system to respond more effectively in hot weather	Sector 6, Risk 3, Type 3	92-94
Measure 7.1	Build urban infrastructure and facilities using materials that can withstand flooding - Build flood-resistant urban infrastructure and facilities - Build and rehabilitate stormwater and runoff drainage systems in urban areas	Sector 7, Risk 1, Type 1	96-98
Measure 7.2	Promoting the use flood-resistant materials in infrastructure construction and urban facilities - Acquire or encourage the acquisition of flood-resistant materials through incentives and awareness campaigns	Sector 7, Risk 1, Type 2	96-98
Measure 7.3	Promote the use of innovative models for building habitats - Promote the use of plan-types and cut laterite bricks	Sector 7, Risk 1, Type 2	96-98
Measure 7.4	Implement a program to reduce and restructure informal settlements - Build drainage structures and easement zones in neighborhoods to cope with flooding	Sector 7, Risk 1, Type 3	96-98
Measure 7.5	Increase construction monitoring and control - Ensure compliance with building standards. - Ensure compliance with infrastructure specifications - Ensure compliance with building regulations concerning (i) the construction of hydraulic, road and human settlements, (ii) land use in urban and rural areas, particularly flood-prone areas, (iii) industrial activities	Sector 7, Risk 1, Type 3	96-98
Measure 7.6	Develop community communication, awareness, and education - Increase people's knowledge of the impact of climate change on the infrastructure and housing sector	Sector 7, Risk 1, Type 3	96-98
Measure 7.7	Build urban infrastructure and facilities using materials that can withstand drought - Building drought-resistant urban drought-resistant urban infrastructure	Sector 7, Risk 2, Type 1	96-98
Measure 7.8	Promote the Green Cities Program. - Promote the systematic planting of drought-resistant plant species	Sector 7, Risk 2, Type 2	96-98
Measure 7.9	Promote the use of models innovative for building habitats - Promote the use of plan-types, cut laterite bricks and tiles.	Sector 7, Risk 2, Type 2	96-98
Measure 7.10	Develop community communication, awareness, and education - Strengthen people's knowledge of the impacts of climate change on the infrastructure and housing sectors.	Sector 7, Risk 2, Type 3	96-98

Measure 7.11	Build urban infrastructure and facilities using materials that can adapt to hot weather - Building infrastructure and facilities that adapt to extreme heat.	Sector 7, Risk 3, Type 1	96-98
Measure 7.12	Alignment planting - Plant shade-giving species to help fix the pavement.	Sector 7, Risk 3, Type 1	96-98
Measure 7.13	Promote the use of environmentally-friendly materials for the construction of infrastructures and urban facilities - Encouraging the use of eco-friendly materials through incentives	Sector 7, Risk 3, Type 2	96-98
Measure 7.14	Promote the Green Cities Program. - Promote the systematic planting of plant species adapted to hot weather.	Sector 7, Risk 3, Type 2	96-98
Measure 7.15	Promote the use of ecological models of habitat construction - Promote the use of plan-types, cut laterite bricks and tiles to cope with hot weather.	Sector 7, Risk 3, Type 2	96-98
Measure 7.16	Develop a fire warning system in the collective social infrastructure - Strengthen partnerships with warning system operators and create a fire alert system to respond more effectively to fires in social and community infrastructures during hot weather.	Sector 7, Risk 3, Type 3	96-98
Measure 7.17	Develop communication, awareness, and education - Increase people's knowledge of the impacts of climate change on the infrastructure and housing sectors	Sector 7, Risk 3, Type 3	96-98
Measure 8.1	Building flood-resistant socio-economic infrastructure for women's, youth and disabled people's organizations - The construction of flood-resistant markets, runways and stores will enable women's, youth and disabled people's organizations to continue carrying out their activities in the event of flooding	Theme 1, Risk 1, Type 1	100-102
Measure 8.2	Draw up a plan to strengthen the resilience of women's, youth and disabled people's organizations - Members of women's, youth and disabled people's organizations will receive appropriate training on what to do in the event of flooding	Theme 1, Risk 1, Type 2	100-102
Measure 8.3	Include a budget line to finance resilience actions by members women's, youth and disabled people's organizations in case of flooding - Flood resilience initiatives will be supported in their implementation.	Theme 1, Risk 1, Type 3	100-102
Measure 8.4	Build hydraulic infrastructure (dams, bolis, boreholes, etc.) - Women's, youth and disabled people's organizations are generally involved in market gardening (off-season crops).	Theme 1, Risk 2, Type 1	100-102
Measure 8.5	Promote awareness-raising plans on best practices for adapting to climate change - Popularizing climate change adaptation tools and measures will increase the resilience of women's, youth and disabled people's organizations.	Theme 1, Risk 2, Type 2	100-102
Measure 8.6	Ensuring that actions relating to gender and climate change are taken into account in state and local budget forecasts - This involves taking steps to ensure that national and local budgets are earmarked for the adaptation of women's associations.	Theme 1, Risk 2, Type 3	100-102
Measure 8.7	Carry out reforestation for shade - The availability of shade for members of women's, youth and disabled people's organizations will enable them to continue their activities in good health.	Theme 1, Risk 3, Type 1	100-102
Measure 8.8	Elaborate an information leaflet on the effects of extreme heat on members of women's organizations, youth, and people with disabilities - Knowing this information will raise awareness and enable you to take action to protect yourself if necessary.	Theme 1, Risk 3, Type 2	100-102
Measure 8.9	Evaluate the activities of members of women's, youth and disabled people's organizations - The aim is to create a structure responsible for monitoring and evaluating the activities of women's associations, and reporting back at the appropriate time.	Theme 1, Risk 3, Type 3	100-102
Measure 9.1	Support CSOs in building flood-resistant infrastructure - The construction of flood-resistant premises, runways and warehouses will enable associations and NGOs to continue their activities even in the event of flooding.	Theme 2, Risk 1, Type 1	104-106
Measure 9.2	Develop an integrated plan for mobilizing and strengthening of CSOs - The aim is to provide a tool that will facilitate the involvement and capacity-building of CSOs in best practices.	Theme 2, Risk 1, Type 2	104-106
Measure 9.3	Support CSO structuring. Ensure the monitoring and evaluation of CSO activities - The aim is to help strengthen the organization and governance of CSOs in order to boost the resilience of their members and communities.	Theme 2, Risk 1, Type 3	104-106
Measure 9.4	Support or facilitate the construction of hydraulic infrastructure (boulis, boreholes, etc.) for the benefit of CSOs - The construction of the works will enable CSOs to continue carrying out their activities even in the event of drought.	Theme 2, Risk 2, Type 1	104-106
