Document Title	Plan Nacional de Adaptación al Cambio Climático del Perú: un insumo para la actualización de la Estrategia Nacional ante el Cambio Climático
Year of NAP submission to the UNFCCC	2021
Version	1
Last updated on	2025-02-05
Notes	This was translated using DeepL, so there may be minor grammatical and translation issues.

Level	Label	Content	Parent Tag	Page #
1	Vision	By 2030, Peru will have implemented all of the MACC established in the NDCs and, as a result of the ambitious nature of the NAP, by 2050 it will be consolidated as a country adapted to the effects of climate change due to the solid implementation of a climate change policy based on knowledge that has allowed it to take advantage of the opportunities offered by innovation, technological development and ancestral knowledge.		247
2	Overall Objective	To reduce and/or avoid current and future damages, losses and alterations triggered by climate change hazards on the livelihoods of populations, ecosystems, watersheds, territories, infrastructure, goods and/or services; as well as, to take advantage of the opportunities offered by climate change for sustainable and resilient development.		250
3	Specific Objectives			
	Specific Objective 1	To reduce the damage, possible alterations and damage to populations and their livelihoods, and the resulting current and future losses, generated by hazards associated with climate change.		250
	Specific Objective 2	To reduce damage to ecosystems, watersheds and territories, possible alterations and consequent current and future losses, generated by hazards associated with climate change.		250
	Specific Objective 3	To reduce damage to infrastructure, goods and/or services, possible alterations and the resulting current and future losses, generated by hazards associated with climate change.		250
4	Strategic Actions			
	Strategic Action 1.1	Develop conditions and capacities among the vulnerable population by strengthening modeling, predictive capacity and knowledge in a context of climate change	Specific Objective 1	252
	Strategic Action 1.2	Strengthen the sustainable use of forestry resources through training for the rural population, indigenous peoples and Afro-Peruvian people in the management of forest resources	Specific Objective 1	252
	Strategic Action 1.3	Implementing good management, improvement and conservation practices among the agricultural population in agricultural production systems	Specific Objective 1	252
	Strategic Action 1.4	Strengthen responsible fishing and aquaculture activities to contribute to the sustainable use of hydrobiological resources	Specific Objective 1	252
	Strategic Action 2.1	Implement forest ecosystem management and conservation measures, including Amazonian rainforests, coastal forests and Andean forests and mountains	Specific Objective 2	253
	Strategic Action 2.2	Strengthen inter-institutional coordination and optimize the system of water supply to multisectoral users	Specific Objective 2	253
	Strategic Action 2.3	Implement good agricultural soil management practices.	Specific Objective 2	253
	Strategic Action 3.1	Develop infrastructures and processes to facilitate planning and water management to agents linked to the energy sector	Specific Objective 3	254
	Strategic Action 3.2	Strengthen and technify the hydraulic sectors for agricultural use	Specific Objective 3	254
	Strategic Action 3.3	Strengthen the sustainable supply of potable water for human use	Specific Objective 3	254
	Strategic Action 3.4	Implement the business strategies for the adaptation of the supply chain to the agricultural value.	Specific Objective 3	254
	Strategic Action 3.5	Develop infrastructures and equipment to ensure the provision of quality health.	Specific Objective 3	254
	Strategic Action 3.6	Diversify and strengthen value added to improve productivity and production of the fishing and aquaculture activity	Specific Objective 3	254
5	Products			
	Product 1	Risk management for the effects of climate change on sectoral planning and investment for sustainable development in public health	Strategic Action 1.1	265
	Product 2	Health facilities use information on climate scenarios in epidemiological and health surveillance for risk management in the face of the effects of climate change on public health.	Strategic Action 1.1	265
	Product 3	Vulnerable populations adopt healthy practices in the face of the increase in vector-borne diseases due to the effects of climate change	Strategic Action 1.1	265
	Product 4	Vulnerable populations adopt healthy practices in the face of increased food- and waterborne diseases due to the effects of climate change	Strategic Action 1.1	266
	Product 5	Vulnerable populations adopt healthy practices in the face of exposure to extreme temperatures caused by the effects of climate change	Strategic Action 1.1	266
	Product 6	Vulnerable population sensitized on healthy practices for risk reduction in the face of the effects of climate change	Strategic Action 1.1	266
	Product 7	Restored and conserved forest ecosystems with adequate forest and wildlife management reduce the risks of climate change and guarantee the ecosystem services of forest ecosystems	Strategic Action 1.2	266
	Product 8	Regional and local governments have timely information systems to implement actions to reduce the effects of extreme weather events on forest systems	Strategic Action 1.2	267
	Product 9	Farmer and native communities trained in productive diversification gain access to markets and reduce risks from the effects of climate change	Strategic Action 1.2	267
	Product 10	Producers have and implement good agricultural practices considering the effects of climate change	Strategic Action 1.3	267
	Product 11	Producers are adequately managing the feeding of livestock in areas vulnerable to hazards associated with climate change	Strategic Action 1.3	267
	Product 12	Agricultural producers accessing breeding services and transfer of resilient genetic resources to adapt to climate change	Strategic Action 1.3	267
	Product 13	Agricultural production areas have mechanisms in place to protect against climate change-related hazards	Strategic Action 1.3	268

	Product 14	Artisanal fishing agents apply good fishing practices in a context of climate change	Strategic Action 1.4	268
	Product 15	Aquaculture farmers apply best practices for aquaculture intensification in a context of climate change	Strategic Action 1.4	268
	Product 16	Aquaculture farmers reduce the risks of climate change effects on aquaculture development	Strategic Action 1.4	268
	Product 17	Aquaculture farmers apply transferred technological knowledge in the aquaculture production chain in the face of the dangers associated with climate change.	Strategic Action 1.4	269
	Product 18	Natural Protected Areas have the necessary conditions to conserve their ecosystems while ensuring the provision of ecosystem services that adapt to the effects of climate change.	Strategic Action 2.1	269
	Product 19	Forest users implement phytosanitary surveillance actions in natural forests and forest plantations to reduce risks from the effects of climate change	Strategic Action 2.1	269
	Product 20	The national government, regional governments and local governments implement risk management processes with a landscape approach to help reduce forest fires.	Strategic Action 2.1	270
	Product 21	Watersheds vulnerable to climate change increase water supply in quantity, quality and timeliness for multi-sectoral users.	Strategic Action 2.2	270
	Product 22	Multi-sectoral users in the basin use water efficiently and sustainably	Strategic Action 2.2	270
	Product 23	Multisectoral actors coordinate sustainable water use and development in watersheds vulnerable to climate change	Strategic Action 2.2	270
	Product 24	Agricultural soils conditioned with soil management and conservation practices improve their productive capacity in areas vulnerable to hazards associated with climate change	Strategic Action 2.3	271
	Product 25	Agricultural producers protecting crop areas in critical flood zones	Strategic Action 2.3	271
	Product 26	Degraded soils that have been salinized by intensive agricultural use are recovered for productive processes that are resilient to hazards associated with climate change.	Strategic Action 2.3	271
	Product 27	Hydropower generation sector agents increase their capacity to regulate water for the sustainability of electricity service supply in watersheds vulnerable to climate change	Strategic Action 3.1	271
	Product 28	Sector agents supply and consume electricity efficiently and sustainably in a context of climate change	Strategic Action 3.1	272
	Product 29	Sector agents have access to information on hydroelectric energy potential considering the effects of climate change to promote sustainable investments	Strategic Action 3.1	272
	Product 30	Water sectors increase their capacity to store and provide water for agricultural use in watersheds vulnerable to climate change	Strategic Action 3.2	272
	Product 31	Hydraulic sectors with efficiency in irrigation systems for agricultural use in basins vulnerable to climate change	Strategic Action 3.2	272
	Product 32	Water infrastructure operators self-manage their water systems considering climate change adaptation actions	Strategic Action 3.2	273
	Product 33	Population with climate change resilient water supply systems	Strategic Action 3.3	273
	Product 34	Drinking water demand management in urban areas vulnerable to climate change	Strategic Action 3.3	273
	Product 35	Articulated and sensitized sector actors adequately manage sanitation services in areas vulnerable to climate change	Strategic Action 3.3	273
	Product 36	Informed agricultural producers develop technological innovations to adapt to climate change in agricultural value chains	Strategic Action 3.4	274
	Product 37	Organized agricultural producers gain access to markets in agricultural value chains in areas vulnerable to climate change	Strategic Action 3.4	274
	Product 38	Vulnerable health services improve their capacity to prevent, prepare for and respond to the occurrence of hazards associated with climate change	Strategic Action 3.5	274
	Product 39	Health services improve access to coverage and care for the population vulnerable to the occurrence of hazards associated with climate change	Strategic Action 3.5	274
	Product 40	Health networks at the national and subnational levels improve their adaptive capacity in the management of comprehensive care in areas vulnerable to the occurrence of hazards associated with climate change	Strategic Action 3.5	275
	Product 41	Vulnerable health infrastructure adopts appropriate technologies for risk reduction in a context of climate change	Strategic Action 3.5	275
	Product 42	Regional governments and local governments with strengthened capacities for the incorporation of risk management in the management of comprehensive care in areas vulnerable to the occurrence of hazards associated with climate change	Strategic Action 3.5	275
	Product 43	Anchoveta fishery for indirect human consumption, sustainably harvested in a climate change scenario	Strategic Action 3.6	275
	Product 44	Fisheries and aquaculture agents have access to preventive information services for the sustainable use of hydrobiological resources in the face of the opportunities and dangers associated with climate change.	Strategic Action 3.6	275
	Product 45	Hydrobiological resources for direct human consumption regulated for sustainable use in a context of climate change	Strategic Action 3.6	276
	Product 46	Artisanal fisheries landing sites (DPA) adapted to the risks of climate change	Strategic Action 3.6	276
<b>6</b>	<b>Measures</b>			
	Measure 1	Implementation of actions related to risk management for the effects of climate change in the planning and investment of organizational units at the sectoral level	Product 1	265
	Measure 2	Access of health sector institutions to sources of financing for risk management in the face of climate change effects on public health.	Product 1	265
	Measure 3	Strengthening of the epidemiological and environmental monitoring and surveillance system that incorporates climate scenarios for risk management in the face of the effects of climate change on public health.	Product 2	265
	Measure 4	Transfer of healthy practices to the vulnerable population in the face of the increase in vector-borne diseases due to the effects of climate change	Product 3	265
	Measure 5	Transfer of healthy practices to the vulnerable population in the face of the increase in diseases caused by contaminated food and water due to the effects of climate change	Product 4	266
	Measure 6	Transfer of healthy practices to the population vulnerable to exposure to extreme temperatures caused by the effects of climate change.	Product 5	266
	Measure 7	Strengthening of actions for information and dissemination of healthy practices for risk reduction in the face of the effects of climate change on public health	Product 6	266
	Measure 8	Implementation of control, supervision, inspection and sanction actions in forests to reduce vulnerability to climatic and non-climatic effects.	Product 7	266
	Measure 9	Implementation of restoration options for forest ecosystems and other wild vegetation ecosystems to maintain the functionality of the landscape and reduce risks to the effects of climate change.	Product 7	266

	Measure 10	Strengthen the use of technologies by forest producers and wildlife managers that contribute to the sustainable management and use of forests, thereby reducing their vulnerability to the effects of climate change.	Product 7	266
	Measure 11	Implementation of the national and subnational early warning system for hazards associated with climate change to reduce the impact on forest	Product 8	267
	Measure 12	Implementation of strategic production chains of farming communities and indigenous peoples to reduce risks from the effects of climate change.	Product 9	267
	Measure 13	Productive diversification in crops and livestock with greater vulnerability to climate change.	Product 10	267
	Measure 14	Integrated pest and disease management in crops and preventive disease management in livestock, with greater vulnerability to climate change.	Product 10	267
	Measure 15	Management of natural grasslands to ensure feed for livestock and reduce their vulnerability to climate change.	Product 11	267
	Measure 16	Management and conservation of cultivated pastures as feed supplementation for livestock in vulnerable areas with hazards associated with climate change.	Product 11	267
	Measure 17	Improvement and transfer of crop and livestock genetic resources to increase their resilience to climate change	Product 12	268
	Measure 18	In situ and ex situ conservation of agrobiodiversity (ABD) to increase crop resilience to climate change	Product 12	268
	Measure 19	Management of wild South American camelids (vicuñas) considering the effects of climate change	Product 12	268
	Measure 20	Design and implementation of an Early Warning System (EWS) to reduce the effects in vulnerable areas with hazards associated with climate change	Product 13	268
	Measure 21	Strengthening agricultural risk transfer systems in the event of adverse climatic events	Product 13	268
	Measure 22	Capacity building in best practices for economic diversification and complementary activities for artisanal fisheries under climate change scenarios	Product 14	268
	Measure 23	Capacity building in good practices in artisanal fishing	Product 14	268
	Measure 24	Capacity building for the use of selective fishing techniques and improved and/or adapted fishing gear to address climate change.	Product 14	268
	Measure 25	Strengthening aquaculture management in a context of climate change.	Product 15	268
	Measure 26	Capacity building in good aquaculture practices (health, quality and safety) in aquaculture.	Product 15	268
	Measure 27	Capacity building in good environmental practices in the face of the dangers associated with climate change.	Product 15	268
	Measure 28	Management of current and future risk to the effects of climate change in the evaluation of areas for aquaculture.	Product 16	269
	Measure 29	Capacity building in the design and implementation of contingency plans for prevention and response to extreme climate events in aquaculture	Product 16	269
	Measure 30	Implementation of transferred technological knowledge in the aquaculture species production chain in the face of the dangers associated with climate change.	Product 17	269
	Measure 31	Recovery of ancestral knowledge and practices in the sustainable use of ecosystem goods and services to adapt to the effects of climate change.	Product 18	269
	Measure 32	Restoration of ecosystems within the National System of Natural Areas Protected by the State (Sinampe) to maintain landscape connectivity and reduce impacts from the effects of climate change	Product 18	269
	Measure 33	Implementation of a national forest dynamics monitoring program to measure the impact of climate change	Product 18	269
	Measure 34	Implementation of sustainable practices for the conservation of ecosystems in watersheds within the Natural Protected Areas in the face of climate change.	Product 18	269
	Measure 35	Implementation of monitoring and control actions in Natural Protected Areas to reduce vulnerability to climatic and non-climatic effects.	Product 18	269
	Measure 36	Implementation of a phytosanitary surveillance system in natural forests and forest plantations to reduce risks from the effects of climate change	Product 19	270
	Measure 37	Strengthening risk management processes with a landscape approach to the effects of climate change to help reduce forest fires	Product 20	270
	Measure 38	Implementation of major hydraulic infrastructure for multisectoral use in watersheds vulnerable to climate change.	Product 21	270
	Measure 39	Conservation and recovery of natural infrastructure for the provision of water ecosystem services in watersheds vulnerable to climate change.	Product 21	270
	Measure 40	Implementation of early warning systems for floods, droughts, floods and glacial hazards in watersheds vulnerable to climate change	Product 21	270
	Measure 41	Implementation of monitoring and surveillance of the quality of water resources in basins vulnerable to climate change	Product 21	270
	Measure 42	Implementation of the hydrometric network for water collection and distribution in major and minor hydraulic infrastructure in watersheds vulnerable to climate change	Product 22	270
	Measure 43	Modernization of the granting of water use rights in vulnerable basins incorporating climate scenarios.	Product 22	270
	Measure 44	Promote the increase of multi-sectoral and multi-stakeholder articulation mechanisms for IWRM in the face of climate change effects.	Product 23	270
	Measure 45	Implementation of information services for multisectoral planning and management of water resources in basins vulnerable to climate change.	Product 23	271
	Measure 46	Implementation of good soil fertilization practices in areas vulnerable to hazards associated with climate change.	Product 24	271
	Measure 47	Implementation of soil erosion management and control technologies in areas vulnerable to hazards associated with climate change.	Product 24	271
	Measure 48	Implementation of infrastructure to protect crop areas in critical areas from flooding.	Product 25	271
	Measure 49	Implementation of recovery technologies for agricultural soils degraded by salinization in areas vulnerable to climate change.	Product 26	271
	Measure 50	Promoting the development of infrastructure that reduces the vulnerability of hydroelectric generation, especially in plants located in basins vulnerable to climate change	Product 27	271
	Measure 51	Promotion of the implementation of infrastructure to protect electricity generation, transmission and distribution from the effects of hazards associated with climate change in vulnerable watersheds.	Product 27	272
	Measure 52	Implementation of good practices for efficient energy use in the economic sectors.	Product 28	272
	Measure 53	Efficient use of hydropower in hydroelectric plants located in basins vulnerable to climate change.	Product 28	272
	Measure 54	Diversification of the energy matrix to reduce pressure on water resources.	Product 28	272
	Measure 55	Implementation of a decision support service in watersheds with hydro-energy potential and vulnerability to climate change.	Product 29	272
	Measure 56	Improvement and construction of reservoirs to provide water services for agricultural use in watersheds vulnerable to climate change	Product 30	272
	Measure 57	Implementation of interventions related to planting and harvesting water for agricultural water security in watersheds vulnerable to climate change	Product 30	272
	Measure 58	Implementation of hydraulic infrastructure for conduction, distribution and application of water for irrigation in watersheds vulnerable to climate change	Product 31	272
	Measure 59	Implementation of protection infrastructure in the hydraulic sectors for agricultural use against the effects of extreme events associated with climate change.	Product 31	272
	Measure 60	Implementation of technified irrigation systems in watersheds vulnerable to climate change	Product 31	272
	Measure 61	Strengthening the institutional framework of the water sectors for agricultural water management in watersheds vulnerable to climate change	Product 32	273

	Measure 62	Technical assistance and capacity building for the sustainable use of water for agricultural use in watersheds vulnerable to climate change.	Product 32	273
	Measure 63	Increasing formal water availability in urban areas vulnerable to climate change.	Product 33	273
	Measure 64	Sanitation Service Providers (EPSs) that incorporate the model of Ecosystem Services Compensation Mechanisms for the implementation of natural infrastructure for the conservation, recovery and sustainable use of water ecosystem services in areas vulnerable to climate change	Product 33	273
	Measure 65	Expansion, optimization and/or improvement of the production capacity of drinking water systems	Product 33	273
	Measure 66	Expansion, optimization and/or improvement of the regulation capacity of drinking water systems.	Product 33	273
	Measure 67	Implementation of redundant infrastructure in water supply systems with greater vulnerability to climate change.	Product 33	273
	Measure 68	Increased micro-metering coverage in urban areas vulnerable to climate change.	Product 34	273
	Measure 69	Reduction of non-revenue water (NRW) in sanitation services in urban areas vulnerable to climate change	Product 34	273
	Measure 70	Implementation of water saving technologies in urban areas vulnerable to climate change	Product 34	273
	Measure 71	Implementation of planning and management instruments for Disaster Risk Management (DRM) in urban sanitation services.	Product 35	273
	Measure 72	Implementation of planning and management tools for climate change adaptation in urban sanitation services.	Product 35	274
	Measure 73	Implementation of strategic agroclimatic information services for adaptation to the effects of climate change.	Product 36	274
	Measure 74	Implementation of adaptive technological innovation services for climate change in agricultural value chains.	Product 36	274
	Measure 75	Implementation of business strategies that incorporate risk and opportunity management in the face of climate change.	Product 37	274
	Measure 76	Value added of agricultural products in value chains in areas vulnerable to climate change.	Product 37	274
	Measure 77	Implementation of prevention, reduction, preparedness and response actions in health services vulnerable to the occurrence of hazards associated with climate change	Product 38	274
	Measure 78	Implementation of actions for the functioning and operation of health services in the event of hazards associated with climate change	Product 38	274
	Measure 79	Access to health financing mechanisms to guarantee continuity of care for the vulnerable population in the event of hazards associated with climate change	Product 39	274
	Measure 80	Implementation of preventive and response strategies in the Geresas, Diris, Diresas and health networks in areas of high vulnerability to the occurrence of hazards associated with climate change.	Product 40	275
	Measure 81	Implementation of technologies in the design of health infrastructure construction and/or habilitation in the face of hazards associated with climate change.	Product 41	275
	Measure 82	Implementation of technologies to improve health infrastructure vulnerable to the occurrence of hazards associated with climate change.	Product 41	275
	Measure 83	Capacity building for regional and local governments to incorporate risk management in the context of climate change into public investments in health.	Product 42	275
	Measure 84	Implementation of an integrated traceability system for the anchoveta resource destined for indirect human consumption.	Product 43	275
	Measure 85	Strengthening the anchoveta fishing quota system under an ecosystem approach that considers the effects of climate change	Product 43	275
	Measure 86	Strengthening of early warning systems for early response to extreme weather events associated with climate change.	Product 44	276
	Measure 87	Implementation of an early warning system for harmful algal blooms and sulfide events in the face of hazards associated with climate change.	Product 44	276
	Measure 88	Strengthening of the market information system and oceanographic conditions in real time	Product 44	276
	Measure 89	Participatory management of artisanal marine and inland fisheries that incorporates climate change.	Product 45	276
	Measure 90	Control, monitoring and supervision of management, regulation and conservation measures of hydrobiological resources for artisanal fishing. Prospecting of hydrobiological resources.	Product 45	276
	Measure 91	Design and implementation of planning and management instruments for the reduction of current and future risks of the DPAs in the face of climate change effects.	Product 46	276
	Measure 92	Implementation of physical protection measures to reduce current and future risks to the DPAs from the effects of climate change.	Product 46	276
