This overview is part of a series prepared by the NAP Global Network Secretariat sharing analysis of the structures of national adaptation plan (NAP) documents.

For more overviews of NAP documents, please visit the NAP Trends platform hosted by the NAP Global Network at: https://trends.napglobalnetwork.org/

To read the full NAP document, visit the United Nations Framework Convention on Climate Change's (UNFCCC) NAP Central: https://napcentral.org/

Document Title	Plan Nacional de Adaptación al Cambio Climático del Perú: un insumo para la actualización de la Estrategia Nacional ante el Cambio Climático
Year of NAP submission to	
the UNFCCC	2021
Version	1
Last updated on	2025-02-05

1	Vision			
		By 2030, Peru will have implemented all of the MACC established in the NDCs and, as a result of the ambitious nature of the NAP, by 2050 it will be consolidated as a country		
		adapted to the effects of climate change due to the solid implementation of a climate change policy based on knowledge that has allowed it to take advantage of the		
		opportunities offered by innovation, technological development and ancestral knowledge.		247
2	Overall Objective			
		To reduce and/or avoid current and future damages, losses and alterations triggered by climate change hazards on the livelihoods of populations, ecosystems, watersheds,		
		territories, infrastructure, goods and/or services; as well as, to take advantage of the opportunities offered by climate change for sustainable and resilient development.		250
3	Specific Objectives			
		To reduce the damage, possible alterations and damage to populations and their livelihoods, and the resulting current and future losses, generated by hazards associated with		
	Specific Objective 1	climate change.		250
	, ,	To reduce damage to ecosystems, watersheds and territories, possible alterations and consequent current and future losses, generated by hazards associated with climate		
	Specific Objective 2	change.		250
	.,	To reduce damage to infrastructure, goods and/or services, possible alterations and the resulting current and future losses, generated by hazards associated with climate		
	Specific Objective 3	change.		250
4	Strategic Actions			
-	Strategic Action 1.1	Develop conditions and capacities among the vulnerable population by strengthening modeling, predictive capacity and knowledge in a context of climate change	Specific Objective 1	252
	ou deagle violen 111	Strengthen the sustainable use of forestry resources through training for the rural population, indigenous peoples and Afro-Peruvian people in the management of forest	opcomo objectivo 1	1202
	Strategic Action 1.2	resources	Specific Objective 1	252
	Strategic Action 1.3	Implementing good management, improvement and conservation practices among the agricultural population in agricultural production systems	Specific Objective 1	252
	Strategic Action 1.4	Strengthen responsible fishing and aquaculture activities to contribute to the sustainable use of hydrobiological resources	Specific Objective 1	252
	Strategic Action 2.1	Implement forest ecosystem management and conservation measures, including Amazonian rainforests, coastal forests and Andean forests and mountains	Specific Objective 2	253
	Strategic Action 2.2	Implement these ecosystem management and conservation measures, including knizzonian raminess, coastat tries and kniza and kniza in tries and industrial measures. Strengthen inter-institutional coordination and optimize the system of water supply to multisectoral users	Specific Objective 2	253
	Strategic Action 2.3	Set again meri-institution action under the system of water supply to mutusectoral users	Specific Objective 2	253
	Strategic Action 3.1	Implement good agricultural soot management practices. Develop infrastructures and processes to facilitate planning and water management to agents linked to the energy sector	Specific Objective 3	254
	Strategic Action 3.2	Develop innactuaties and processes to relating planning and water management to agents taked to the energy sector. Strengthen and technify the hydraulic sectors for agricultural use	Specific Objective 3	254
				254
	Strategic Action 3.3	Strengthen the sustainable supply of potable water for human use	Specific Objective 3	254
	Strategic Action 3.4 Strategic Action 3.5	Implement the business strategies for the adaptation of the supply chain to the agricultural value. Develop infrastructures and equipment to ensure the provision of quality health.	Specific Objective 3 Specific Objective 3	254
			' '	
_	Strategic Action 3.6	Diversify and strengthen value added to improve productivity and production of the fishing and aquaculture activity	Specific Objective 3	254
5	Products		0	005
	Product 1	Risk management for the effects of climate change on sectoral planning and investment for sustainable development in public health	Strategic Action 1.1	265
		Health facilities use information on climate scenarios in epidemiological and health surveillance for risk management in the face of the effects of climate change on public		
	Product 2	health.	Strategic Action 1.1	265
	Product 3	Vulnerable populations adopt healthy practices in the face of the increase in vector-borne diseases due to the effects of climate change	Strategic Action 1.1	265
	Product 4	Vulnerable populations adopt healthy practices in the face of increased food- and waterborne diseases due to the effects of climate change	Strategic Action 1.1	266
	Product 5	Vulnerable populations adopt healthy practices in the face of exposure to extreme temperatures caused by the effects of climate change	Strategic Action 1.1	266
	Product 6	Vulnerable population sensitized on healthy practices for risk reduction in the face of the effects of climate change	Strategic Action 1.1	266
		Restored and conserved forest ecosystems with adequate forest and wildlife management reduce the risks of climate change and guarantee the ecosystem services of forest		
	Product 7	ecosystems	Strategic Action 1.2	266
	Product 8	Regional and local governments have timely information systems to implement actions to reduce the effects of extreme weather events on forest systems	Strategic Action 1.2	267
	Product 9	Farmer and native communities trained in productive diversification gain access to markets and reduce risks from the effects of climate change	Strategic Action 1.2	267
	Product 10	Producers have and implement good agricultural practices considering the effects of climate change	Strategic Action 1.3	267
	Product 11	Producers are adequately managing the feeding of livestock in areas vulnerable to hazards associated with climate change	Strategic Action 1.3	267
	Product 12	Agricultural producers accessing breeding services and transfer of resilient genetic resources to adapt to climate change	Strategic Action 1.3	267
	Product 13	Agricultural production areas have mechanisms in place to protect against climate change-related hazards	Strategic Action 1.3	268
	Product 14	Artisanal fishing agents apply good fishing practices in a context of climate change	Strategic Action 1.4	268
	Product 15	Aquaculture farmers apply best practices for aquaculture intensification in a context of climate change	Strategic Action 1.4	268

	Product 16	Aquaculture farmers reduce the risks of climate change effects on aquaculture development	Strategic Action 1.4	268
	Product 17	Aquaculture farmers apply transferred technological knowledge in the aquaculture production chain in the face of the dangers associated with climate change.	Strategic Action 1.4	269
		Natural Protected Areas have the necessary conditions to conserve their ecosystems while ensuring the provision of ecosystem services that adapt to the effects of climate		
	Product 18	change.	Strategic Action 2.1	269
	Product 19	Forest users implement phytosanitary surveillance actions in natural forests and forest plantations to reduce risks from the effects of climate change	Strategic Action 2.1	269
	Product 20		Strategic Action 2.1	270
		The national government, regional governments and local governments implement risk management processes with a landscape approach to help reduce forest fires.		
	Product 21	Watersheds vulnerable to climate change increase water supply in quantity, quality and timeliness for multi-sectoral users.	Strategic Action 2.2	270
	Product 22	Multi-sectoral users in the basin use water efficiently and sustainably	Strategic Action 2.2	270
	Product 23	Multisectoral actors coordinate sustainable water use and development in watersheds vulnerable to climate change	Strategic Action 2.2	270
		Agricultural soils conditioned with soil management and conservation practices improve their productive capacity in areas vulnerable to hazards associated with climate		
	Product 24	change	Strategic Action 2.3	271
	Product 25	Agricultural producers protecting crop areas in critical flood zones	Strategic Action 2.3	271
	Product 26	Degraded soils that have been salinized by intensive agricultural use are recovered for productive processes that are resilient to hazards associated with climate change.	Strategic Action 2.3	271
	Product 27	Hydropower generation sector agents increase their capacity to regulate water for the sustainability of electricity service supply in watersheds vulnerable to climate change	Strategic Action 3.1	271
	Product 28	Sector agents supply and consume electricity efficiently and sustainably in a context of climate change	Strategic Action 3.1	272
	Product 29	Sector agents have access to information on hydroelectric energy potential considering the effects of climate change to promote sustainable investments	Strategic Action 3.1	272
	Product 30			272
		Water sectors increase their capacity to store and provide water for agricultural use in watersheds vulnerable to climate change	Strategic Action 3.2	
	Product 31	Hydraulic sectors with efficiency in irrigation systems for agricultural use in basins vulnerable to climate change	Strategic Action 3.2	272
	Product 32	Water infrastructure operators self-manage their water systems considering climate change adaptation actions	Strategic Action 3.2	273
	Product 33	Population with climate change resilient water supply systems	Strategic Action 3.3	273
	Product 34	Drinking water demand management in urban areas vulnerable to climate change	Strategic Action 3.3	273
	Product 35	Articulated and sensitized sector actors adequately manage sanitation services in areas vulnerable to climate change	Strategic Action 3.3	273
	Product 36	Informed agricultural producers develop technological innovations to adapt to climate change in agricultural value chains	Strategic Action 3.4	274
	Product 37	Organized agricultural producers gain access to markets in agricultural value chains in areas vulnerable to climate change	Strategic Action 3.4	274
	Product 38	Vulnerable health services improve their capacity to prevent, prepare for and respond to the occurrence of hazards associated with climate change	Strategic Action 3.5	274
	Product 39	Health services improve access to coverage and care for the population vulnerable to the occurrence of hazards associated with climate change	Strategic Action 3.5	274
	1 loudet 33	Health networks at the national and subnational levels improve their adaptive capacity in the management of comprehensive care in areas vulnerable to the occurrence of	Strategic Action 5.5	2/4
	Duradician 40		Ot	075
	Product 40	hazards associated with climate change	Strategic Action 3.5	275
	Product 41	Vulnerable health infrastructure adopts appropriate technologies for risk reduction in a context of climate change	Strategic Action 3.5	275
		Regional governments and local governments with strengthened capacities for the incorporation of risk management in a context of climate change in public investments in		
	Product 42	health	Strategic Action 3.5	275
	Product 43	Anchoveta fishery for indirect human consumption, sustainably harvested in a climate change scenario	Strategic Action 3.6	275
		Fisheries and aquaculture agents have access to preventive information services for the sustainable use of hydrobiological resources in the face of the opportunities and		
	Product 44	dangers associated with climate change.	Strategic Action 3.6	275
	Product 45	Hydrobiological resources for direct human consumption regulated for sustainable use in a context of climate change	Strategic Action 3.6	276
	Product 46	Artisanal fisheries landing sites (DPA) adapted to the risks of climate change	Strategic Action 3.6	276
6	Measures	Artisanat hisheries tanding sites (DFA) adapted to the risks of cumate change	Strategic Action 5.0	270
0				
	Measure 1	Implementation of actions related to risk management for the effects of climate change in the planning and investment of organizational units at the sectoral level	Product 1	265
	Measure 1 Measure 2	Access of health sector institutions to sources of financing for risk management in the face of climate change effects on public health.	Product 1 Product 1	265 265
		Access of health sector institutions to sources of financing for risk management in the face of climate change effects on public health.		
	Measure 2	Access of health sector institutions to sources of financing for risk management in the face of climate change effects on public health. Strengthening of the epidemiological and environmental monitoring and surveillance system that incorporates climate scenarios for risk management in the face of the	Product 1	265
	Measure 2 Measure 3	Access of health sector institutions to sources of financing for risk management in the face of climate change effects on public health. Strengthening of the epidemiological and environmental monitoring and surveillance system that incorporates climate scenarios for risk management in the face of the effects of climate change on public health.	Product 1 Product 2	265 265
	Measure 2 Measure 3	Access of health sector institutions to sources of financing for risk management in the face of climate change effects on public health. Strengthening of the epidemiological and environmental monitoring and surveillance system that incorporates climate scenarios for risk management in the face of the effects of climate change on public health. Transfer of healthy practices to the vulnerable population in the face of the increase in vector-borne diseases due to the effects of climate change	Product 1 Product 2	265 265
	Measure 3 Measure 4 Measure 5	Access of health sector institutions to sources of financing for risk management in the face of climate change effects on public health. Strengthening of the epidemiological and environmental monitoring and surveillance system that incorporates climate scenarios for risk management in the face of the effects of climate change on public health. Transfer of healthy practices to the vulnerable population in the face of the increase in vector-borne diseases due to the effects of climate change Transfer of healthy practices to the vulnerable population in the face of the increase in diseases caused by contaminated food and water due to the effects of climate change	Product 1 Product 2 Product 3 Product 4	265 265 265 266
	Measure 3 Measure 4 Measure 5 Measure 6	Access of health sector institutions to sources of financing for risk management in the face of climate change effects on public health. Strengthening of the epidemiological and environmental monitoring and surveillance system that incorporates climate scenarios for risk management in the face of the effects of climate change on public health. Transfer of healthy practices to the vulnerable population in the face of the increase in vector-borne diseases due to the effects of climate change Transfer of healthy practices to the vulnerable population in the face of the increase in diseases caused by contaminated food and water due to the effects of climate change Transfer of healthy practices to the population vulnerable to exposure to extreme temperatures caused by the effects of climate change.	Product 1 Product 2 Product 3 Product 4 Product 5	265 265 265 266 266
	Measure 2 Measure 3 Measure 4 Measure 5 Measure 6 Measure 7	Access of health sector institutions to sources of financing for risk management in the face of climate change effects on public health. Strengthening of the epidemiological and environmental monitoring and surveillance system that incorporates climate scenarios for risk management in the face of the effects of climate change on public health. Transfer of healthy practices to the vulnerable population in the face of the increase in vector-borne diseases due to the effects of climate change Transfer of healthy practices to the vulnerable population in the face of the increase in diseases caused by contaminated food and water due to the effects of climate change Transfer of healthy practices to the population vulnerable to exposure to extreme temperatures caused by the effects of climate change. Strengthening of actions for information and dissemination of healthy practices for risk reduction in the face of the effects of climate change on public health	Product 2 Product 3 Product 4 Product 5 Product 6	265 265 265 266 266 266
	Measure 3 Measure 4 Measure 5 Measure 6	Access of health sector institutions to sources of financing for risk management in the face of climate change effects on public health. Strengthening of the epidemiological and environmental monitoring and surveillance system that incorporates climate scenarios for risk management in the face of the effects of climate change on public health. Transfer of healthy practices to the vulnerable population in the face of the increase in vector-borne diseases due to the effects of climate change Transfer of healthy practices to the vulnerable population in the face of the increase in diseases caused by contaminated food and water due to the effects of climate change Transfer of healthy practices to the population vulnerable to exposure to extreme temperatures caused by the effects of climate change. Strengthening of actions for information and dissemination of healthy practices for risk reduction in the face of the effects of climate change on public health Implementation of control, supervision, inspection and sanction actions in forests to reduce vulnerability to climatic and non-climatic effects. 		T	
Measure 21	Strengthening agricultural risk transfer systems in the event of adverse climatic events	Product 13	268
Measure 22	Capacity building in best practices for economic diversification and complementary activities for artisanal fisheries under climate change scenarios	Product 14	268
Measure 23	Capacity building in good practices in artisanal fishing	Product 14	268
Measure 24	Capacity building for the use of selective fishing techniques and improved and/or adapted fishing gear to address climate change.	Product 14	268
Measure 25	Strengthening aquaculture management in a context of climate change.	Product 15	268
Measure 26	Capacity building in good aquaculture practices (health, quality and safety) in aquaculture.	Product 15	268
Measure 27	Capacity building in good environmental practices in the face of the dangers associated with climate change.	Product 15	268
Measure 28	Management of current and future risk to the effects of climate change in the evaluation of areas for aquaculture.	Product 16	269
Measure 29	Capacity building in the design and implementation of contingency plans for prevention and response to extreme climate events in aquaculture	Product 16	269
Measure 30	Implementation of transferred technological knowledge in the aquaculture species production chain in the face of the dangers associated with climate change.	Product 17	269
Measure 31	Recovery of ancestral knowledge and practices in the sustainable use of ecosystem goods and services to adapt to the effects of climate change.	Product 18	269
	Restoration of ecosystems within the National System of Natural Areas Protected by the State (Sinanpe) to maintain landscape connectivity and reduce impacts from the		
Measure 32	effects of climate change	Product 18	269
Measure 33	Implementation of a national forest dynamics monitoring program to measure the impact of climate change	Product 18	269
Measure 34	Implementation of sustainable practices for the conservation of ecosystems in watersheds within the Natural Protected Areas in the face of climate change.	Product 18	269
Measure 35	Implementation of monitoring and control actions in Natural Protected Areas to reduce vulnerability to climatic and non-climatic effects.	Product 18	269
Measure 36	Implementation of a phytosanitary surveillance system in natural forests and forest plantations to reduce risks from the effects of climate change	Product 19	270
Measure 37	Strengthening risk management processes with a landscape approach to the effects of climate change to help reduce forest fires	Product 20	270
Measure 38	Implementation of major hydraulic infrastructure for multisectoral use in watersheds vulnerable to climate change.	Product 21	270
Measure 39	Conservation and recovery of natural infrastructure for the provision of water ecosystem services in watersheds vulnerable to climate change.	Product 21	270
Measure 40	Implementation of early warning systems for floods, droughts, floods and glacial hazards in watersheds vulnerable to climate change	Product 21	270
Measure 41	Implementation of monitoring and surveillance of the quality of water resources in basins vulnerable to climate change	Product 21	270
Measure 42	Implementation of the hydrometric network for water collection and distribution in major and minor hydraulic infrastructure in watersheds vulnerable to climate change	Product 22	270
Measure 43	Modernization of the granting of water use rights in vulnerable basins incorporating climate scenarios.	Product 22	270
Measure 44	Promote the increase of multi-sectoral and multi-stakeholder articulation mechanisms for IWRM in the face of climate change effects.	Product 23	270
Measure 45	Implementation of information services for multisectoral planning and management of water resources in basins vulnerable to climate change.	Product 23	271
Measure 46	Implementation of good soil fertilization practices in areas vulnerable to hazards associated with climate change.	Product 24	271
Measure 47	Implementation of soil erosion management and control technologies in areas vulnerable to hazards associated with climate change.	Product 24	271
Measure 48	Implementation of infrastructure to protect crop areas in critical areas from flooding.	Product 25	271
Measure 49	Implementation of recovery technologies for agricultural soils degraded by salinization in areas vulnerable to climate change.	Product 26	271
Measure 50	Promoting the development of infrastructure that reduces the vulnerability of hydroelectric generation, especially in plants located in basins vulnerable to climate change	Product 27	271
	Promotion of the implementation of infrastructure to protect electricity generation, transmission and distribution from the effects of hazards associated with climate change in		
Measure 51	vulnerable watersheds.	Product 27	272
Measure 52	Implementation of good practices for efficient energy use in the economic sectors.	Product 28	272
Measure 53	Efficient use of hydropower in hydroelectric plants located in basins vulnerable to climate change.	Product 28	272
Measure 54	Diversification of the energy matrix to reduce pressure on water resources.	Product 28	272
Measure 55	Implementation of a decision support service in watersheds with hydro-energy potential and vulnerability to climate change.	Product 29	272
Measure 56	Improvement and construction of reservoirs to provide water services for agricultural use in watersheds vulnerable to climate change	Product 30	272
Measure 57	Implementation of interventions related to planting and harvesting water for agricultural water security in watersheds vulnerable to climate change	Product 30	272
Measure 58	Implementation of hydraulic infrastructure for conduction, distribution and application of water for irrigation in watersheds vulnerable to climate change	Product 31	272
Measure 59	Implementation of protection infrastructure in the hydraulic sectors for agricultural use against the effects of extreme events associated with climate change.	Product 31	272
Measure 60	Implementation of technified irrigation systems in watersheds vulnerable to climate change	Product 31	272
Measure 61	Strengthening the institutional framework of the water sectors for agricultural water management in watersheds vulnerable to climate change	Product 32	273
Measure 62	Technical assistance and capacity building for the sustainable use of water for agricultural use in watersheds vulnerable to climate change.	Product 32	273
Measure 63	Increasing formal water availability in urban areas vulnerable to climate change.	Product 33	273
	Sanitation Service Providers (EPSs) that incorporate the model of Ecosystem Services Compensation Mechanisms for the implementation of natural infrastructure for the		
	conservation, recovery and sustainable use of water ecosystem services in areas vulnerable to climate change	Product 33	273
Measure 64			273
Measure 64 Measure 65	Expansion, optimization and/or improvement of the production capacity of drinking water systems	Product 33	
	Expansion, optimization and/or improvement of the production capacity of drinking water systems Expansion, optimization and/or improvement of the regulation capacity of drinking water systems.	Product 33 Product 33	273
Measure 65 Measure 66	Expansion, optimization and/or improvement of the regulation capacity of drinking water systems.	Product 33	
Measure 65 Measure 66 Measure 67	Expansion, optimization and/or improvement of the regulation capacity of drinking water systems. Implementation of redundant infrastructure in water supply systems with greater vulnerability to climate change.	Product 33 Product 33	273 273 273
Measure 65 Measure 66 Measure 67 Measure 68	Expansion, optimization and/or improvement of the regulation capacity of drinking water systems. Implementation of redundant infrastructure in water supply systems with greater vulnerability to climate change. Increased micro-metering coverage in urban areas vulnerable to climate change.	Product 33 Product 33 Product 34	273 273
Measure 65 Measure 66 Measure 67 Measure 68 Measure 69	Expansion, optimization and/or improvement of the regulation capacity of drinking water systems. Implementation of redundant infrastructure in water supply systems with greater vulnerability to climate change. Increased micro-metering coverage in urban areas vulnerable to climate change. Reduction of non-revenue water (NRW) in sanitation services in urban areas vulnerable to climate change	Product 33 Product 33 Product 34 Product 34	273 273 273
Measure 65 Measure 66 Measure 67 Measure 68 Measure 69 Measure 70	Expansion, optimization and/or improvement of the regulation capacity of drinking water systems. Implementation of redundant infrastructure in water supply systems with greater vulnerability to climate change. Increased micro-metering coverage in urban areas vulnerable to climate change. Reduction of non-revenue water (NRW) in sanitation services in urban areas vulnerable to climate change Implementation of water saving technologies in urban areas vulnerable to climate change	Product 33 Product 33 Product 34 Product 34 Product 34	273 273 273 273 273
Measure 65 Measure 66 Measure 67 Measure 68 Measure 69 Measure 70 Measure 71	Expansion, optimization and/or improvement of the regulation capacity of drinking water systems. Implementation of redundant infrastructure in water supply systems with greater vulnerability to climate change. Increased micro-metering coverage in urban areas vulnerable to climate change. Reduction of non-revenue water (NRW) in sanitation services in urban areas vulnerable to climate change Implementation of water saving technologies in urban areas vulnerable to climate change Implementation of planning and management instruments for Disaster Risk Management (DRM) in urban sanitation services. Measure 79	Access to health financing mechanisms to guarantee continuity of care for the vulnerable population in the event of hazards associated with climate change	Product 39	274
	Implementation of preventive and response strategies in the Geresas, Diris, Diresas and health networks in areas of high vulnerability to the occurrence of hazards		
Measure 80	associated with climate change.	Product 40	275
Measure 81	Implementation of technologies in the design of health infrastructure construction and/or habilitation in the face of hazards associated with climate change.	Product 41	275
Measure 82	Implementation of technologies to improve health infrastructure vulnerable to the occurrence of hazards associated with climate change.	Product 41	275
Measure 83	Capacity building for regional and local governments to incorporate risk management in the context of climate change into public investments in health.	Product 42	275
Measure 84	Implementation of an integrated traceability system for the anchoveta resource destined for indirect human consumption.	Product 43	275
Measure 85	Strengthening the anchoveta fishing quota system under an ecosystem approach that considers the effects of climate change	Product 43	275
Measure 86	Strengthening of early warning systems for early response to extreme weather events associated with climate change.	Product 44	276
Measure 87	Implementation of an early warning system for harmful algal blooms and sulfide events in the face of hazards associated with climate change.	Product 44	276
Measure 88	Strengthening of the market information system and oceanographic conditions in real time	Product 44	276
Measure 89	Participatory management of artisanal marine and inland fisheries that incorporates climate change.	Product 45	276
	Control, monitoring and supervision of management, regulation and conservation measures of hydrobiological resources for artisanal fishing. Prospecting of		
Measure 90	hydrobiological resources.	Product 45	276
Measure 91	Design and implementation of planning and management instruments for the reduction of current and future risks of the DPAs in the face of climate change effects.	Product 46	276
Measure 92	Implementation of physical protection measures to reduce current and future risks to the DPAs from the effects of climate change.	Product 46	276
