About	This overview is part of a series prepared by the NAP Global Network Secretariat sharing analysis of the structures of national adaptation plan (NAP) documents. For more overviews of NAP documents, please visit the NAP Trends platform hosted by the NAP Global Network at: https://trends.napglobalnetwork.org/ To read the full NAP document, visit the United Nations Framework Convention on Climate Change's (UNFCCC) NAP Central: https://napcentral.org/

Document Title	Report on the National Adaptation Plan for the period 2021-2030, with a Vision to 2050
Year of NAP submission to the UNFCCC	2025
Version	1
Last updated on	2025-09-08

Level	Label	Content	Parent Tag	Page #
1	**Vision to 2050**			
		From 2030 to 2050, continue to strengthen the CCA capacity of people, technical infrastructure, and natural systems to protect and improve the quality of life, ensure food security, energy security, water security, gender equality, social security, public health, and the protection of natural resources, develop the country sustainably in the context of climate change, and ensure safety from natural disasters. Maintain CCA in all socio-economic activities to proactively adapt to climate change, take advantage of opportunities from climate change for socio-economic development, and active contribute together with the international community to CC response and protection of the Earth's climate system.		68
2	**Overall Objective**			
		Minimise vulnerability and risks from the negative impacts of CC by strengthening the resilience and adaptation capacity of natural, economic, and social systems; minimise CC-induced losses and damages; and promote the integration of CCA into strategies and plans		61
3	**Specific Objectives**			
	Specific Objective 1	Enhance the resilience and adaptation capacity of natural, economic, and social systems and ensure sustainable livelihoods		61
	Specific Objective 2	Mitigate natural disaster risks and reduce damage caused by increasing natural disasters and climate extremes, contributing to addressing CC-induced losses and damages		64
	Specific Objective 3	Complete institutions and promote potential and resources for effective CCA		65
4	**Sub-Objective**			
	Sub-Objective 1.1	Effectively use and prevent the depletion and degradation of resources	Specific Objective 1	62
	Sub-Objective 1.2	Develop climate-resilient and smart agriculture	Specific Objective 1	62
	Sub-Objective 1.3	Manage, protect, and develop forests and ecosystems	Specific Objective 1	62
	Sub-Objective 1.4	Develop CCA infrastructure	Specific Objective 1	63
	Sub-Objective 1.5	Strengthen medical and healthcare systems	Specific Objective 1	63
	Sub-Objective 1.6	Ensure social security and gender equality	Specific Objective 1	63
	Sub-Objective 2.1	Make forecasts and early warnings	Specific Objective 2	64
	Sub-Objective 2.2	Construct and upgrade works serving natural disaster prevention and control	Specific Objective 2	64
	Sub-Objective 2.3	Ensure the safety of people's lives and property and reduce CC-induced losses and damages	Specific Objective 2	65
	Sub-Objective 3.1	Develop and complete institutions and policies	Specific Objective 3	65
	Sub-Objective 3.2	Communicate, raise awareness, and promote public engagement	Specific Objective 3	66
	Sub-Objective 3.3	Develop human resources	Specific Objective 3	66
	Sub-Objective 3.4	Conduct scientific research and develop technology	Specific Objective 3	66
	Sub-Objective 3.5	Mobilise financial resources for CCA	Specific Objective 3	67
	Sub-Objective 3.6	Promote international cooperation for CC response	Specific Objective 3	67
5	**Groups of Task**			
	Group of Task 1.1.1	Implement national water resources planning and establish and implement integrated river basin plans which identify areas that require strict protection	Sub-Objective 1.1	90
	Group of Task 1.1.2	Investigate and evaluate underground water sources, closely manage underground water extraction, and protect quality of water sources	Sub-Objective 1.1	91

	Group of Task 1.1.3	Strengthen solutions to manage, regulate, extract, and use water resources	Sub-Objective 1.1	91
	Group of Task 1.1.4	Strengthen the water storage capacity, focusing on areas at risk of drought, water shortage, and adverse impacts of saline intrusion	Sub-Objective 1.1	91
	Group of Task 1.1.5	Rationally and efficiently exploit and strengthen solutions to protect the soil and minimise soil degradation	Sub-Objective 1.1	92
	Group of Task 1.2.1	Improve the efficiency of agricultural land use, convert part of the rice area to high-value, economically efficient crops or rice-aquaculture areas; make use of and promote the advantages of tropical agriculture; develop effective organic, ecological, low-GHG emission, and environmentally friendly agriculture based on the natural advantages of each region and market demand	Sub-Objective 1.2	92
	Group of Task 1.2.2	Promote regional cooperation and linkages; develop major agricultural product value chains; make planning on areas for production; develop large-scale, modern, concentrated commercial agriculture which applies advanced technology and science	Sub-Objective 1.2	94
	Group of Task 1.2.3	Arrange cropping structure, and promote intensive farming and intercropping	Sub-Objective 1.2	94
	Group of Task 1.2.4	Promote the restructuring of the agricultural sector, implement climate smart agriculture; develop sustainable models of crop production, livestock, aquaculture, and fishing that are suitable to drought and salinity conditions; and improve the CC resilience and adaptability of agriculture in each region and area	Sub-Objective 1.2	95
	Group of Task 1.2.5	Shift the structure of crops and livestock, and develop new varieties of climate-resilient and smart plants and animals	Sub-Objective 1.2	97
	Group of Task 1.2.6	Promote aquaculture, as well as the exploitation, protection, and development of aquatic resources of high added value	Sub-Objective 1.2	98
	Group of Task 1.3.1	Strictly protect existing natural forests, enhance the protective capacity of watershed forests and coastal forests; develop large timber forests, and restore forest landscapes	Sub-Objective 1.3	98
	Group of Task 1.3.2	Promote community engagement in forest protection, management, and development in order to improve livelihoods, income, and employment opportunities in forestry	Sub-Objective 1.3	99
	Group of Task 1.3.3	Consolidate and complete the system of monitoring, evaluation, and emergency response to forest fires	Sub-Objective 1.3	99
	Group of Task 1.3.4	Manage ecosystems and biodiversity	Sub-Objective 1.3	99
	Group of Task 1.3.5	Strengthen the resilience of natural ecosystems, protect and conserve biodiversity against CC impacts and sea level rise	Sub-Objective 1.3	99
	Group of Task 1.3.6	Establish and expand the operation of marine conservation zones and nature reserves	Sub-Objective 1.3	100
	Group of Task 1.3.7	Develop community-based and ecosystem-based models for CCA; strengthen the participation of local communities in the protection, conservation, and management of biodiversity	Sub-Objective 1.3	100
	Group of Task 1.4.1	Upgrade and renovate sectoral infrastructure and simultaneously implement measures on environmental protection and CCA	Sub-Objective 1.4	100
	Group of Task 1.4.2	Build, upgrade, and renovate infrastructure in urban areas, concentrated population areas, industrial parks, and coastal and island resettlement areas; develop urban areas, coastal urban areas; apply new materials and technologies capable of CCA in construction and urban fields	Sub-Objective 1.4	101
	Group of Task 1.4.3	Build, upgrade, and renovate medical facilities and schools to ensure their resilience to CC impacts and natural disasters	Sub-Objective 1.4	102
	Group of Task 1.4.4	Upgrade and renovate traffic works in areas with a high risk of natural disasters and vulnerability to climate change; develop and perfect the expressway network and inter-regional traffic connection system	Sub-Objective 1.4	102
	Group of Task 1.4.5	Prioritise the construction and renovation of water drainage systems to prevent flooding due to heavy rains, floods, high tides, and storm surges for large urban areas and coastal urban areas	Sub-Objective 1.4	103
	Group of Task 1.4.6	Focus on completing freshwater storage works for daily needs and production; build and complete the system of irrigation works; build a number of new large multi-purpose reservoirs in drought and water-scarce areas	Sub-Objective 1.4	103
	Group of Task 1.5.1	Develop a network of medical and healthcare systems to meet requirements for the prevention and control of new CC-induced epidemics and diseases	Sub-Objective 1.5	103
	Group of Task 1.5.2	Invest in technology and equipment to prevent and treat increasing CC-induced diseases	Sub-Objective 1.5	104
	Group of Task 1.5.3	Build and replicate models of healthcare and public health in order to improve community resilience and adaptability	Sub-Objective 1.5	104
	Group of Task 1.5.4	Develop a system of monitoring and early warning of CC impacts on human health	Sub-Objective 1.5	104
	Group of Task 1.6.1	Develop sustainable livelihood models and ecosystem-based and community-based CCA models; focus on training, career conversion, technology support, and access to capital sources and risk insurance services for the social protection system, people in high-risk areas, and those vulnerable to CC impacts	Sub-Objective 1.6	105
	Group of Task 1.6.2	Enhance the participation of women, youth, and people in the implementation of policies and activities on natural disaster prevention and control and CCA	Sub-Objective 1.6	105

	Group of Task 2.1.1	Invest in, upgrade, and modernise the national network for climate change monitoring, hydrometeorological monitoring, and specialised natural disaster monitoring and surveillance systems; socialise a number of activities to monitor climate extremes	Sub-Objective 2.1	106
	Group of Task 2.1.2	Upgrade and modernise technologies in the analysis, forecasting, and warning of weather and natural disasters on a par with technologies in developed countries in Asia; apply advanced and modern forecasting technologies	Sub-Objective 2.1	107
	Group of Task 2.1.3	Improve capacity for providing climate services and information for disaster prevention and control	Sub-Objective 2.1	107
	Group of Task 2.1.4	Build capacity in climate and disaster information transmission, ensuring the complete, accurate, and timely transmission of information for effective disaster prevention and control; develop a multi-disaster warning system that can be linked/combined with the national information and communication infrastructure	Sub-Objective 2.1	107
	Group of Task 2.1.5	Minimise loss and damage through climate-resilient and disaster risk reduction activities; improve disaster risk management systems; and strengthen capacity and measures to manage and promote disaster risk reduction	Sub-Objective 2.1	108
	Group of Task 2.2.1	Strengthen, upgrade, and complete the river, sea dyke, irrigation, and hydropower systems; prioritise ensuring the safety of reservoir, dam, river, and sea dyke systems	Sub-Objective 2.2	108
	Group of Task 2.2.2	Build and upgrade storm shelters for ships and boats	Sub-Objective 2.2	109
	Group of Task 2.2.3	Build and consolidate works to prevent and control riverbank and coastal erosion in areas with complex erosion	Sub-Objective 2.2	109
	Group of Task 2.2.4	Strengthen capacity to prevent flash floods, landslides, storms, major floods, and extreme floods; prevent the harmful effects of drought, high tides, and saltwater intrusion	Sub-Objective 2.2	110
	Group of Task 2.3.1	Make plans, invest, relocate, and rearrange residential areas in areas frequently affected by extreme climate; monitor, supervise, and warn in areas where relocation cannot be conducted for timely evacuation and minimise risks	Sub-Objective 2.3	110
	Group of Task 2.3.2	Strengthen measures to ensure safety for citizens; develop and construct disaster-resilient safe houses in association with new rural development work; construct community houses that can be also used as evacuation venues in case of emergent natural disasters to ensure human safety and post-disaster recovery	Sub-Objective 2.3	111
	Group of Task 2.3.3	Build the capacity of search and rescue task forces	Sub-Objective 2.3	111
	Group of Task 2.3.4	Deploy solutions to minimise losses and damages through climate risk assessment and management, risk financing mechanisms such as climate risk insurance, contingency funds, and social protection programmes	Sub-Objective 2.3	112
	Group of Task 3.1.1	Review, amend, and supplement specialised legal regulations, strategies, master plans, and development plans at all levels for the period 2021-2030, with a vision to 2050, to ensure the requirements for CC response and CCA integration	Sub-Objective 3.1	113
	Group of Task 3.1.2	Complete regulations on the management of climate change adaptation activities; develop sets of criteria for assessing climate risks, identify projects and tasks for CCA, and evaluate the performance of implementation; mainstream gender equality and promote the participation of women and young people in CCA programmes and activities	Sub-Objective 3.1	114
	Group of Task 3.1.3	Develop and perfect inter-regional and inter-sectoral coordination mechanism in CCA; and mechanisms and policies suitable to the objectives of integrating and promoting CCA activities that bring co-benefits to sustainable socio-economic development, the mitigation of natural disaster risks, and the reduction of GHG emissions	Sub-Objective 3.1	115
	Group of Task 3.1.4	Develop mechanisms and policies to promote financial and credit services, and the development of the climate risk insurance market	Sub-Objective 3.1	116
	Group of Task 3.1.5	Complete regulations on M&E for CCA results and effectiveness; establish and operate a national, sectoral, and provincial M&E system for CCA activities	Sub-Objective 3.1	117
	Group of Task 3.2.1	Diversify communication methods; improve the quality of mass media communication	Sub-Objective 3.2	117
	Group of Task 3.2.2	Develop and implement a national communication programme; organise training courses for authorities at all levels, social organisations, and communities; promote movements of youth and women on natural disaster prevention and control and CCA	Sub-Objective 3.2	117
	Group of Task 3.2.3	Preserve and promote traditional culture and indigenous knowledge; disseminate and replicate CCA activities, and ecosystem-based and community-based CCA models	Sub-Objective 3.2	118
	Group of Task 3.3.1	Develop and conduct foster and refresh trainings on CCA and disaster risk reduction	Sub-Objective 3.3	119
	Group of Task 3.3.2	Implement general educational programmes integrated with CC response and disaster risk management at all educational levels; improve the quality of teaching programmes on CC response	Sub-Objective 3.3	119
	Group of Task 3.4.1	Propose and develop policies to attract businesses to invest in the research and transfer of climate change response technologies	Sub-Objective 3.4	119
	Group of Task 3.4.2	Promote the research and deployment of advanced CCA technologies	Sub-Objective 3.4	120
	Group of Task 3.4.3	Conduct scientific research, technology development and transfer, and digital transformation in CCA; research CCA solutions that can generate co-benefits for GHG emissions reduction and sustainable socio-economic development; address losses and damages caused by climate change	Sub-Objective 3.4	120

	Group of Task 3.4.4	Research, develop, supplement, and update standards and technical regulations on the planning, design, and construction of works and infrastructure, with consideration given to the long-term impacts of CC	Sub-Objective 3.4	120
	Group of Task 3.5.1	Review, amend, and supplement mechanisms and policies to facilitate the attraction of investment and international support for CCA	Sub-Objective 3.5	121
	Group of Task 3.5.2	Review, amend, and supplement regulations and guidelines to monitor financial resources and support for CCA in accordance with Vietnamese law and the requirements of the UNFCCC	Sub-Objective 3.5	122
	Group of Task 3.5.3	Strengthen the implementation of international advocacy activities, calling for and attracting investment in climate change response	Sub-Objective 3.5	122
	Group of Task 3.6.1	Fully fulfil the country's obligations as a signatory to the UNFCCC, the Paris Agreement on Climate Change, and other international treaties that Viet Nam is a member	Sub-Objective 3.6	123
	Group of Task 3.6.2	Promote cooperation, research, and application of science and technology in implementing solutions to adapt to CC and sea level rise, forecasting and warning of natural disasters, and appropriate response solutions to the transboundary impacts of CC response	Sub-Objective 3.6	123
6	**Specific Tasks**			
	Specific Task 1	Develop the National Strategy on water resources to 2030, with a vision to 2050	Group of Task 1.1.1	90
	Specific Task 2	Implement the master plan on water resources for the period 2021-2030, with a vision to 2050	Group of Task 1.1.1	90
	Specific Task 3	Develop integrated master plans on inter-provincial river basins and inter-provincial water sources	Group of Task 1.1.1	90
	Specific Task 4	Monitor, supervise, and evaluate changes in transboundary water resources and enhance international cooperation to protect and prevent the depletion and degradation of transboundary water resources	Group of Task 1.1.1	90
	Specific Task 5	Investigate and evaluate underground water sources for the construction of a water supply network to adapt to climate change for vulnerable areas (Central Highlands, Mekong Delta, etc.)	Group of Task 1.1.2	91
	Specific Task 6	Determine areas where underground water extraction is restricted as well as the underground water extraction threshold for areas, and propose to apply measures for water storage, water regulation and allocation, water saving, restriction of water extraction and use, and prevention of degradation and depletion by each level of water scarcity	Group of Task 1.1.2	91
	Specific Task 7	Complete the national water resource monitoring system	Group of Task 1.1.3	91
	Specific Task 8	Review and adjust 11 inter-reservoir operating procedures in river basins towards real-time operation procedure	Group of Task 1.1.3	91
	Specific Task 9	Establish, carry out, and replicate models of water use in an economical and efficient manner	Group of Task 1.1.3	91
	Specific Task 10	Investigate, evaluate, and develop overall solutions on water storage based on the natural trends of each region, with priority given to areas at risk of drought, water shortage, and saline intrusion	Group of Task 1.1.4	91
	Specific Task 11	Reasonably use the unused land and alluvial land along rivers and coasts for the development of forests and green trees in urban areas and industrial parks	Group of Task 1.1.5	92
	Specific Task 12	Study measures on the improvement and protection of degraded agricultural production land; and prevent and minimize soil degradation caused by erosion, drought, and saline intrusion	Group of Task 1.1.5	92
	Specific Task 13	Evaluate the efficiency of rice land and restructure inefficient rice land into land for fruit trees, vegetables, crash crops, or mixed farming models (rice farming combined with aquaculture, rice - vegetables, fruit trees, animal feed) of high economic efficiency, as suitable for each ecological region	Group of Task 1.2.1	92
	Specific Task 14	Exploit and develop the genetic resources of indigenous livestock breeds towards effective commodity production associated with eco-tourism; and support the development of brands and geographical indications for high-quality and advantageous indigenous livestock breeds	Group of Task 1.2.1	92
	Specific Task 15	Restructure crops based on comparative advantages, markets, and in a CCA manner in the region (agroforestry, agriculture and fisheries, giving priority to large-scale commodity production, chain production, and enhancing added value)	Group of Task 1.2.1	93
	Specific Task 16	Support the application of agroforestry solutions for the development of fruit trees in order to improve the livelihoods and CC adaptability of people in the Northwest region of Viet Nam	Group of Task 1.2.1	93
	Specific Task 17	Apply science and technology, high technology, mechanization, automation and advanced farming processes, and sustainable climate resilient intensive farming in ecological regions	Group of Task 1.2.1	93
	Specific Task 18	Strengthen activities to control diseases and environmental pollution, and improve veterinary services for CCA and sustainable development of livestock to take advantages of ecological regions	Group of Task 1.2.1	93
	Specific Task 19	Develop regional linkages in the implementation of adaptation activities for sub-sectors in the agricultural sector	Group of Task 1.2.2	94
	Specific Task 20	Develop key agricultural centers and key raw material areas to serve agricultural processing facilities in the Mekong Delta in the long term and sustainably	Group of Task 1.2.2	94

	Specific Task 21	Develop adaptive and linkage models in livestock production from the improvement of livestock breeds, breeding technology, and consumption market (domestic market and targeting at export market) to waste treatment according to ecological conditions	Group of Task 1.2.2	94
	Specific Task 22	Determine CCA seasonal structure	Group of Task 1.2.3	94
	Specific Task 23	Replicate methods of intercropping and intensive farming of climate-smart crops in different regions	Group of Task 1.2.3	94
	Specific Task 24	Transform the agricultural production structure in ecological sub-regions of the Mekong Delta	Group of Task 1.2.3	95
	Specific Task 25	Develop advanced production models (synchronous application of irrigation systems, integrated nutrient management, use of disease-free seedlings and varieties in favor of export, intensive agriculture management, and environmentally friendly measures of disease prevention)	Group of Task 1.2.4	95
	Specific Task 26	Replicate the system of rice intensification (SRI); intercropping of maize-bean (IMB) and cassava-peanut-bean (ICB) models; integrated coffee management (ICoM); VietGAP (VGP) model of climate-resilient fruit tree intensification	Group of Task 1.2.4	95
	Specific Task 27	Replicate livestock models which improve barns and apply climate-smart high technology	Group of Task 1.2.4	95
	Specific Task 28	Apply interconnected and integrated models along the value chain: high-tech livestock, biosecurity, Integrated Food-Energy Systems (IFES), ecosystem-based adaptation livestock (AEbA), VietGAP livestock production, and climate-smart agriculture (CSA)	Group of Task 1.2.4	96
	Specific Task 29	Replicate the CCA model of green feed for cattle and other ruminant (GFC) livestock production	Group of Task 1.2.4	96
	Specific Task 30	Shift from scattered and small-scale animal husbandry to concentrated animal husbandry in the farm model; synchronously invest in the animal husbandry system and the environment; and apply advanced livestock technology to improve adaptability and added value	Group of Task 1.2.4	96
	Specific Task 31	Strengthen the operation of the monitoring and early warning system for CC-induced natural disasters and risks to serve agricultural production	Group of Task 1.2.4	96
	Specific Task 32	Strengthen aquatic veterinary services and strictly control, forecast, and warn timely of any epidemic/disease, adverse environment and extreme weather to reduce risks in aquaculture	Group of Task 1.2.4	96
	Specific Task 33	Analyze, select and breed high-quality, high-salinity-resistant, brown planthopper-resistant rice varieties that are suitable for saline soils in coastal plains to adapt to climate change; improve soybean plants to enhance their resilience to climate change using CRISPR/Cas9 gene editing techniques; and produce raw sugarcane in arid regions of the South-Central and Central Highlands	Group of Task 1.2.5	97
	Specific Task 34	Shift the structure of crops to adapt to climate change on land affected by drought and saltwater intrusion; develop a sustainable rice-shrimp farming system, such as shrimp farming under the forest canopy (MSH) to adapt to climate change; climate resilient model of rice-shrimp (MRS); shift the structure of crops to develop effective, sustainable and climate-resilient rice production	Group of Task 1.2.5	97
	Specific Task 35	Evaluate and select silkworm varieties that are thermal & humid-tolerant, contributing to the stable, sustainable, and effective development of mulberry cultivation and silkworm rearing	Group of Task 1.2.5	97
	Specific Task 36	Replicate the model of local climate-tolerant varieties of poultry and waterflow (LCT)	Group of Task 1.2.5	97
	Specific Task 37	Shift the structures between fishing, aquaculture, and protection of aquatic resources; develop services for aquaculture	Group of Task 1.2.5	98
	Specific Task 38	Replicate climate-resilient multi-species, multi-stage (IAQ), and biosafety and biosecurity (BSS) mixed aquaculture models	Group of Task 1.2.6	98
	Specific Task 39	Shift the structure of reasonable-capacity vessels and boats, and innovate fishing technology to achieve climate-resilient high efficiency	Group of Task 1.2.6	98
	Specific Task 40	Develop a national forestry master plan for the period of 2021 - 2030, with a vision to 2050	Group of Task 1.3.1	98
	Specific Task 41	Implement afforestation projects, with priority given to watershed forests, coastal forests, and large timber forests	Group of Task 1.3.1	98
	Specific Task 42	Restore and develop watershed protection forests and coastal mangrove forests, combat illegal exploitation and conserve forest biodiversity.	Group of Task 1.3.1	98
	Specific Task 43	Replicate the model of mangrove ecosystem restoration in degraded aquaculture lagoons following the direction of forestry and fishery combination and community-based model	Group of Task 1.3.2	99
	Specific Task 44	Support the development of forest-based, climate-resilient community livelihood models	Group of Task 1.3.2	99
	Specific Task 45	Upgrade and perfect the system of monitoring, evaluation, and emergency response to forest fires	Group of Task 1.3.3	99
	Specific Task 46	Assess risks and propose measures for controlling the invasion of alien species under the impact of climate change	Group of Task 1.3.4	99
	Specific Task 47	Evaluate the breeding, reproduction, and conservation activities of endangered, precious, and rare species prioritised for protection at conservation facilities; and propose solutions for breeding, reproduction, and conservation of some priority species, improve/ restore habitats, and pilot the release of natural hybrid populations	Group of Task 1.3.5	99
	Specific Task 48	Continue to conserve and develop inter-provincial biodiversity corridors in the South-Central region	Group of Task 1.3.6	100

	Specific Task 49	Build and develop community-based and climate-resilient biodiversity conservation models	Group of Task 1.3.7	100
	Specific Task 50	Continue to invest in the construction of infrastructure for fishing ports, fishing wharfs, and storm sheltering anchorages in the coastal areas of the Central and Southeast regions	Group of Task 1.4.1	100
	Specific Task 51	Develop CCA information and communication infrastructure	Group of Task 1.4.1	100
	Specific Task 52	Upgrade and renovate the system of tourism and sports infrastructure and facilities in order to improve their resilience to climate change, with a focus on tourist sites, and develop CCA tourism products	Group of Task 1.4.1	100
	Specific Task 53	Develop a project for the maintenance and conservation of cultural and historic relics in the context of climate change, focusing on the maintenance and conservation of cultural relics	Group of Task 1.4.1	101
	Specific Task 54	Guide the development and implementation of plans on upgrading and renovating power plants, power transmission stations, substations, power transmission line systems, fuel pipelines, mines, coal yards, and other energy facilities in coastal areas	Group of Task 1.4.1	101
	Specific Task 55	Build, upgrade, and renovate urban and rural infrastructure systems and concentrated population areas based on land use planning, climate change, and sea level rise scenarios	Group of Task 1.4.2	101
	Specific Task 56	Upgrade and renovate the infrastructure of industrial parks and coastal and island resettlement areas based on sea level rise scenarios	Group of Task 1.4.2	101
	Specific Task 57	Implement projects to apply advanced technologies; use new, sustainable, and highly CC-resistant materials in construction and urban sectors	Group of Task 1.4.2	101
	Specific Task 58	Build, upgrade, and renovate medical facilities to ensure healthcare conditions; ensure accessibility and ability to maintain operations in the event of natural disasters or evacuate in case of emergency natural disasters	Group of Task 1.4.3	102
	Specific Task 59	Build, upgrade, and renovate schools to ensure resilience to the impacts of climate change; ensure safety and enhance resilience to natural disasters	Group of Task 1.4.3	102
	Specific Task 60	Upgrade, renovate, and construct road and waterway works in areas which are often threatened by floods and sea level rise, especially in the Mekong Delta	Group of Task 1.4.4	102
	Specific Task 61	Upgrade, renovate, and build road works that are landslide-resistant in the Northern mountainous region and the Central Highlands	Group of Task 1.4.4	102
	Specific Task 62	Invest in, develop, and perfect the expressway network and inter-regional transport system	Group of Task 1.4.4	102
	Specific Task 63	Implement flood control solutions in large urban areas in provinces and cities	Group of Task 1.4.5	103
	Specific Task 64	Pilot and invest in technical solutions to adapt to flooding caused by heavy rains, flood tides, and sea level rise in the coastal urban areas in the Central region of Viet Nam	Group of Task 1.4.5	103
	Specific Task 65	Build a number of new freshwater storage works for daily life and production in the context of climate change, with priority given to areas at risk of drought and water scarcity	Group of Task 1.4.6	103
	Specific Task 66	Build and complete irrigation systems, build a number of new large, multi-purpose reservoirs for water supply and agricultural production in the context of climate change	Group of Task 1.4.6	103
	Specific Task 67	Develop a medical and healthcare network, giving priority to ethnic minorities and remote and isolated areas to meet the requirements of prevention of epidemics, diseases, and new diseases arising from the impacts of climate change	Group of Task 1.5.1	103
	Specific Task 68	Invest in technology and equipment for qualified medical facilities to treat climate-sensitive diseases such as malaria, diarrhoea, and respiratory and cardiovascular issues	Group of Task 1.5.2	104
	Specific Task 69	Build and replicate models of management and monitoring of epidemic diseases related to weather and climate change	Group of Task 1.5.3	104
	Specific Task 70	Build and replicate climate-resilient models of environmental sanitation and clean water for communities and medical facilities, focusing on rural, mountainous, and coastal areas, especially those affected by storms, floods, droughts, and saltwater intrusion	Group of Task 1.5.3	104
	Specific Task 71	Build and replicate models of nutrition, food, and infectious and noninfectious diseases; apply environmentally friendly, CCA, and renewable technologies, and use clean energy for community and medical facilities	Group of Task 1.5.3	104
	Specific Task 72	Invest in and develop a monitoring and early warning system of CC impacts on health	Group of Task 1.5.4	104
	Specific Task 73	Build and replicate models for the cultural and spiritual life stabilisation of local communities during resettlement under CC impacts in order to protect grassroots cultural institutions	Group of Task 1.6.1	105
	Specific Task 74	Enhance the capacity of local officials to protect and promote tangible cultural heritage, intangible cultural heritage, and documentary heritage values in the face of the impacts of climate change by local knowledge	Group of Task 1.6.1	105
	Specific Task 75	Develop guidelines for mainstreaming gender equality, enhancing the involvement of women and youth in the implementation of policies and their participation in programmes and activities on natural disaster prevention and control and adaptation to climate change	Group of Task 1.6.2	105

	Specific Task 76	Develop and train soft skills for female workers and young people involved in new economic sectors in the context of CCA	Group of Task 1.6.2	105
	Specific Task 77	Build a climate change and sea level rise monitoring system throughout the mainland of Viet Nam	Group of Task 2.1.1	106
	Specific Task 78	Modernise the hydrometeorological and saltwater intrusion monitoring system.	Group of Task 2.1.1	106
	Specific Task 79	Develop dedicated disaster monitoring systems for the prevention and control of storms, floods, flash floods, inundation, landslides, and riverbank and coastal erosion; ensure the safe operation of reservoirs	Group of Task 2.1.1	106
	Specific Task 80	Socialise a number of extreme climate monitoring activities, giving priority to automatic rain gauge systems	Group of Task 2.1.1	106
	Specific Task 81	Modernise hydrometeorological forecasting technology; forecast and make early warnings for natural disasters, extreme weather, and climate phenomena; and apply advanced and modern forecasting technology, giving priority to the development of technology forquantitative precipitation estimation, flash flood and landslide warnings, and impact-based forecasting	Group of Task 2.1.2	107
	Specific Task 82	Implement the global framework for climate services in Viet Nam to serve socio-economic sectors and natural disaster prevention and control	Group of Task 2.1.3	107
	Specific Task 83	Invest in the expansion of satellite ground information stations, mobile communication equipment, and a monitoring system of fishing vessels with satellite technology; enhance capacity for transmission of information; ensure complete, accurate, and timely transmission and distribution of information of natural disasters to all localities, people across the country, and ships operating at sea	Group of Task 2.1.4	107
	Specific Task 84	Upgrade and effectively operate the multi-disaster warning system, combined with the national information and communication infrastructure	Group of Task 2.1.4	107
	Specific Task 85	Review and update the classification of disaster risk levels	Group of Task 2.1.5	108
	Specific Task 86	Develop disaster risk zoning and risk warnings, make disaster warning maps to serve the planning and direction of natural disaster prevention and control and CCA	Group of Task 2.1.5	108
	Specific Task 87	Develop a database on climate change and a database on natural disaster prevention and control; improve users' ability to access and share the information online	Group of Task 2.1.5	108
	Specific Task 88	Develop and implement plans on natural disaster prevention and control; determine measures of response to natural disasters, managing community-based disaster risks, and overcoming natural disaster consequences at all levels	Group of Task 2.1.5	108
	Specific Task 89	Invest in the establishment of a disaster early warning system for reservoirs to take the initiative to respond to climate change	Group of Task 2.2.1	108
	Specific Task 90	Review and assess the safety of irrigation works, hydropower plants, and natural disaster prevention works	Group of Task 2.2.1	108
	Specific Task 91	Develop inundation maps and flood prevention and control plans for downstream areas of key reservoirs in case of emergency water discharge and dam failure	Group of Task 2.2.1	109
	Specific Task 92	Invest in construction, repair, and upgrading to ensure the safety of reservoirs, river dykes, sea dykes, and natural disaster prevention works at high risk of vulnerability due to the impacts of climate change	Group of Task 2.2.1	109
	Specific Task 93	Consolidate and construct key and urgent natural disaster prevention works	Group of Task 2.2.1	109
	Specific Task 94	Build and upgrade storm shelters for ships and boats according to plans, with linkage to logistics services and fisheries information, including island areas	Group of Task 2.2.2	109
	Specific Task 95	Consolidate and build riverbank and coastal erosion prevention works in key/urgent areas and areas with serious and complicated landslides	Group of Task 2.2.3	109
	Specific Task 96	Establish a monitoring and warning system for flash floods, floods, and landslides in high-risk areas	Group of Task 2.2.4	110
	Specific Task 97	Develop a prevention and control plan on the harmful effects of drought, high tides, and saltwater intrusion	Group of Task 2.2.4	110
	Specific Task 98	Strengthen capacity for prevention of storms, major floods, and extreme floods in river basins nationwide	Group of Task 2.2.4	110
	Specific Task 99	Review, build, and upgrade irrigation works, giving priority to works in estuaries and vulnerable areas in order to respond to storms, floods, droughts, sea level rise, and saltwater intrusion	Group of Task 2.2.4	110
	Specific Task 100	Invest in, arrange, and rearrange residential areas in regions that are frequently affected by storms, storm surges, floods, and riverbank and coastal erosion, or that are at risk of flash floods or landslides	Group of Task 2.3.1	110
	Specific Task 101	Strengthen measures for natural disaster monitoring, control, and warning measures in places where relocation is impossible in order to actively prevent, avoid, and mitigate natural disasters, especially areas at high risk of storms, floods, storm surges, and riverbank and coastal erosion, or atrisk of flash floods, landslides, land subsidence, or geological hazards	Group of Task 2.3.1	111
	Specific Task 102	Build flood- and storm-resilient safe houses in the North-Central, South-Central, and South areas of the country	Group of Task 2.3.2	111
	Specific Task 103	Pilot and invest in technical solutions to adapt to flooding caused by heavy rains, flood tides, and sea level rise in coastal urban areas in Central Viet Nam	Group of Task 2.3.2	111

	Specific Task 104	Pilot and invest in technical solutions on the prevention and control of flash floods and landslides in residential clusters in mountainous areas	Group of Task 2.3.2	111
	Specific Task 105	Strengthen the capacity of search and rescue forces at all levels, ensuring security, politics, social order, and safety in natural disaster situations	Group of Task 2.3.3	111
	Specific Task 106	Update climate change scenarios periodically as prescribed (every 5 years). Update climate change scenarios in accordance with the Law on Hydrometeorology and reports of the Intergovernmental Panel on Climate Change (every 5 years)	Group of Task 2.3.4	112
	Specific Task 107	Periodically update national climate assessments, climate change impacts, and climate change action plans by ministries, sectors, and provinces and cities	Group of Task 2.3.4	112
	Specific Task 108	Assess impacts, vulnerability, losses, and damages caused by climate change	Group of Task 2.3.4	112
	Specific Task 109	Assess climate risks and implement solutions on the sharing of climate risks and the reduction of losses and damage caused by climate change	Group of Task 2.3.4	112
	Specific Task 110	Research on the scientific basis, practical implementation, and international experience in climate change response, and propose the completion of legal documents on climate change response	Group of Task 3.1.1	113
	Specific Task 111	Review, amend, and supplement specialised laws and legal documents in order to respond to climate change	Group of Task 3.1.1	113
	Specific Task 112	Review, develop, and update sectoral development strategies, national planning, national sectoral planning, regional planning, and provincial planning based on the provisions of the Law on Planning and climate change scenarios, with a focus on to areas vulnerable to the negative impacts of climate change	Group of Task 3.1.1	113
	Specific Task 113	Implement a master plan on natural disaster prevention and control and irrigation for the period 2021 - 2030, with a vision to 2050	Group of Task 3.1.1	113
	Specific Task 114	Develop and promulgate housing support policies for people in areas frequently affected by storms and floods	Group of Task 3.1.1	113
	Specific Task 115	Integrate climate change adaptation factors in the formulation, appraisal, and approval of coastal urban planning projects approved by the Prime Minister	Group of Task 3.1.1	114
	Specific Task 116	Develop criteria for the assessment of climate risks	Group of Task 3.1.2	114
	Specific Task 117	Develop sets of criteria for the determination of investment projects and tasks on climate change adaptation under the approval authority of the Prime Minister	Group of Task 3.1.2	114
	Specific Task 118	Develop technical standards and regulations for sectors and fields to adapt to climate change	Group of Task 3.1.2	114
	Specific Task 119	Develop guidelines for vulnerability assessments, cost-benefit analyses, screening, and selection of climate change adaptation solutions for agricultural sectors	Group of Task 3.1.2	114
	Specific Task 120	Complete technical guidance for technical solutions on the construction of technical infrastructure works to respond to urban flooding (ground levelling, drainage, regulating reservoirs, embankments, etc.)	Group of Task 3.1.2	115
	Specific Task 121	Develop a set of indicators and guide the integration of CCA into specific programmes, projects, and action plans of the agricultural sector	Group of Task 3.1.2	115
	Specific Task 122	Develop a resource mobilisation mechanism and encourage participation and investment from all economic sectors in the climate change adaptation	Group of Task 3.1.3	115
	Specific Task 123	Renovate support mechanisms and policies (in terms of land, finance, and technology) for enterprises involved in the development of large-scale adaptation models in the agricultural sector	Group of Task 3.1.3	115
	Specific Task 124	Develop a financial mechanism and policies that support CCA forestry development	Group of Task 3.1.3	115
	Specific Task 125	Review and supplement policies for finance and land support to encourage investment sources under public-private partnerships (PPP) for the development of climate-smart agriculture	Group of Task 3.1.3	115
	Specific Task 126	Review and assess industrial, energy, and trade mechanisms and policies in the context of international economic integration to adapt to climate change	Group of Task 3.1.3	115
	Specific Task 127	Review and assess international treaties, agreements, and trade barriers related to climate change adaptation	Group of Task 3.1.3	116
	Specific Task 128	Review, amend, build, and supplement mechanisms and policies in the health sector on the protection of public health in the context of climate change	Group of Task 3.1.3	116
	Specific Task 129	Improve employment policies to encourage green and sustainable job creation	Group of Task 3.1.3	116
	Specific Task 130	Develop policies to promote integration, create green jobs, and support job transition; develop sustainable livelihoods for people, especially workers whose purpose of land use has to be changed or affected by impacts of climate change, environmental incidents and disasters	Group of Task 3.1.3	116
	Specific Task 131	Develop mechanisms and policies to promote financial and credit services, and the development of the climate risk insurance market	Group of Task 3.1.4	116

	Specific Task 132	Complete mechanisms and policies to develop green credit in line with green transformation goals and climate change adaptation	Group of Task 3.1.4	116
	Specific Task 133	Review and update an M&E system for climate change adaptation at national level	Group of Task 3.1.5	117
	Specific Task 134	Develop and implement a project for strengthening communication, enhancing communication capacity, and diversifying communication modes for hydrology forecasting, natural disaster forecasting and warning, and climate change response	Group of Task 3.2.1	117
	Specific Task 135	Develop and implement communication programmes on losses and damages, natural disasters, response to climate change, co-benefits in climate change adaptation and mitigation, and development of models of adaptation to climate change for communities	Group of Task 3.2.2	117
	Specific Task 136	Develop and implement projects for awareness raising and enhancing the capacity for climate change adaptation and mitigation of disaster risks for authorities at all levels, social organisations, and communities	Group of Task 3.2.2	117
	Specific Task 137	Organise training courses to improve the skills and roles of women and youth in developing and implementing CCA and natural disaster prevention and control	Group of Task 3.2.2	118
	Specific Task 138	Develop and implement training and communication programmes on the development of models of sustainable forest and forestry development, mangrove ecosystem restoration, community-based livelihood models, and adaptation to climate change based on ecosystem and biodiversity conservation; promote the role of artisans and local knowledge in CCA for local authorities, education institutions, social organisations, and communities	Group of Task 3.2.3	118
	Specific Task 139	Apply, disseminate, and replicate local knowledge in CCA	Group of Task 3.2.3	118
	Specific Task 140	Develop and implement a capacity building project for officers at ministries, branches, and localities to ensure updates and alignment with domestic regulations and international treaties on climate change of which Viet Nam is a member	Group of Task 3.3.1	119
	Specific Task 141	Update, mainstream, and integrate the contents of CC response and natural disaster prevention and control into the general education curriculum at all levels	Group of Task 3.3.2	119
	Specific Task 142	Improve the quality and capacity of teachers and education officials in climate change and natural disaster prevention and control	Group of Task 3.3.2	119
	Specific Task 143	Review and propose incentive mechanisms and policies to encourage enterprises to invest, study, and transfer CCA technologies	Group of Task 3.4.1	119
	Specific Task 144	Organise researches on advanced CCA technologies	Group of Task 3.4.2	120
	Specific Task 145	Implement research, development, and effective application of new technologies, innovation, and digital transformation in CCA	Group of Task 3.4.3	120
	Specific Task 146	Research and implement CCA solutions that can generate co-benefits together with GHG emissions reductions and sustainable socio-economic development	Group of Task 3.4.3	120
	Specific Task 147	Develop technical standards and regulations in various fields to adapt to climate change	Group of Task 3.4.4	120
	Specific Task 148	Review, develop, and complete a system of technical standards, regulations, and guidelines on the construction of CCA road and railway transport infrastructure, with consideration given to the long-term impacts of CC	Group of Task 3.4.4	120
	Specific Task 149	Review, supplement, and develop new technical regulations and standards on the planning and construction of infrastructure works in energy, services, and commerce	Group of Task 3.4.4	121
	Specific Task 150	Review, supplement, and develop new technical regulations and standards on the planning and construction of natural disaster prevention and control works, especially reservoirs, dams, dykes, and embankments, to actively prevent and control floods and storms according to the design level and assure safety from the increasing impacts of climate change	Group of Task 3.4.4	121
	Specific Task 151	Review, correct, and develop new technical construction codes and standards for housing and public works in areas that are frequently affected by natural disasters	Group of Task 3.4.4	121
	Specific Task 152	Review, correct, and develop new technical construction codes and standards for infrastructure supporting the water supply, drainage, and solid waste treatment, in accordance with the updated scenarios of climate change and sea level rise	Group of Task 3.4.4	121
	Specific Task 153	Review, amend, and supplement mechanisms and policies to facilitate the attraction of investment and international support for CCA; develop investment cooperation models for CCA	Group of Task 3.5.1	121
	Specific Task 154	Develop regulations and guidelines for monitoring financial resources to support climate change response	Group of Task 3.5.2	122
	Specific Task 155	Strengthen the implementation of international advocacy activities, calling for and attracting investment in climate change response	Group of Task 3.5.3	122

	Specific Task 156	Proactively approach and promote Viet Nam's involvement in the international Adaptation Fund and the Loss and Damage Fund	Group of Task 3.5.3	122
	Specific Task 157	Build capacity of domestic agencies to become accredited entities of the Green Climate Fund, the Adaptation Fund, the Loss and Damage Fund, and other funds	Group of Task 3.5.3	122
	Specific Task 158	Periodically update and implement the Nationally Determined Contributions and the National Adaptation Plan	Group of Task 3.6.1	123
	Specific Task 159	Develop and periodically update a Biennial Transparency Report, a National Adaptation Plan, National Communication on CC, and other national reports on climate change	Group of Task 3.6.1	123
	Specific Task 160	Develop and implement cooperation programmes and projects with international partners on CCA in Viet Nam	Group of Task 3.6.2	123
	Specific Task 161	Organise and participate in international programmes and forums, and strengthen cooperation and exchange in research, training, and transfer of technology on climate change response, prevention and minimisation of losses and damage caused by climate change	Group of Task 3.6.2	123
